IA
Part B

FFY2014
State Performance Plan / Annual Performance Report
In order to ensure consistent data across indicators, provide the number of districts in this field and the data will be loaded into the applicable indicator data tables.

This data will be prepopulated in indicators B3A, B4A, B4B, B9, and B10.

General Supervision System:

The systems that are in place to ensure that IDEA Part B requirements are met, e.g., monitoring, dispute resolution, etc.

Since 1974, Iowa has been divided into intermediate agencies (Area Education Agencies) to provide specialized services. The AEAs were created in order to provide equity in the provision of programs and services across counties or merged areas. One key difference between Iowa’s AEA system and intermediate units in other states is that Iowa’s AEAs are mandatory. It is also mandatory that each local school district be assigned to an area education agency that will provide the services the school district needs. This is the only system in the country that has this tightly structured system.

The AEAs carry special education general supervision and compliance responsibilities and the charge to provide the services needed by the local school districts. Their primary role is provision of special education support services to individuals under the age of 21 years requiring special education and related services, media services to all children through grade 12, and other educational services to pupils and education staff. The AEAs also define the system used to locate and identify students suspected of having disabilities and provide the personnel to conduct evaluation activities in collaboration with LEAs.

Iowa’s Part B general supervision system is a partnership between the Department of Education and the AEAs and is multifaceted. The components include: 1) support practices that improve educational outcomes for students (described under technical assistance and professional development); 2) use of multiple methods to identify and correct noncompliance within one year; and 3) mechanisms to encourage and support improvement and enforce compliance.

Dispute Resolution. The State uses a system for dispute resolution including both informal and formal mechanisms. Resolution Facilitation is a way to resolve differences instead of, or before use of, formal proceedings provided by the State. The SEA has written procedures for resolving any complaint, including a complaint filed by an organization or individual from another state. The SEA has widely disseminated these procedures to parents and other interested individuals, including the Iowa Parent Training and Information Center, Disability Rights Iowa, independent living centers and other appropriate entities. A Resolution Facilitator assists in resolving differences between parents, schools and private service providers. Mediation is voluntary on the part of all parties and conducted by a qualified and impartial mediator who is trained in effective mediation techniques. Mediation can occur at any time, even prior to the filing of a due process hearing request. Whenever a due process hearing request is filed, the parties involved in the dispute have an opportunity for an impartial due process hearing.

Monitoring - Area Education Agencies (intermediate agencies). Using a five-year cycle, the SEA conducts accreditation visits to each of Iowa’s 9 Area Education Agencies. Two AEAs receive an accreditation visit each year. During this visit AEA documents are reviewed and internal (AEA staff) and external (Staff from school districts served by the AEA) interviews are held that relate to the agency’s five-year Comprehensive Improvement Plan and the services the agency provides in accordance with the eight required standards and one optional standard outlined in Chapter 72 of the Iowa Code. During the accreditation process, the special education services the agency provides are a part of each of the eight required standards. A targeted interview is held with special education staff; topics discussed during this interview include the agency’s State Performance Plan indicator data, LEA (district) special education procedural compliance data, the AEA’s general supervision responsibilities and other AEA data used by the Iowa Department of Education to make the accreditation determination regarding the agency.

Monitoring - Local Education Agencies (school districts). Utilizing a five-year cycle, the SEA conducts accreditation visits to each of Iowa’s public school districts. Approximately 20% of public school districts receive an accreditation visit each year. Districts have been assigned a specific year in the cycle for the on-site visit, with the cycle being maintained over time. Each year a balance of small, large, rural and urban districts are visited. The Accreditation Site Visit process includes Iowa Chapter 12, Equity, Special Education and Title Programs.

The year prior to a site visit, each district completes a special education procedural compliance review related to the implementation of IDEA. Data are collected through a Web-based tool, with a report developed for each district to identify individual student noncompliance and whether or not the issues are identified as a system level issue. If noncompliance is identified as a system level issue, the district must write a Corrective Action Plan (CAP) and submit it to the SEA for approval prior to implementation. The AEA then monitors and verifies the correction of individual noncompliance as well as the implementation of the CAP. Individual student noncompliance is to be corrected within 60 school days and system level CAPs are to be fully implemented as soon as possible, but no later than one year from date of notification. After the AEA verifies that all corrections have been made, documentation is submitted to the SEA.

During the integrated site visit, multiple interviews take place on a variety of topics. The on-site visit allows for conversations to occur regarding student performance and
implementation of the special education practices in the district. Interview groups include community partners, parents, teachers, school board, district administrators, and support staff. One of the interviews allows for district staff to be interviewed with a specific focus on special education practices and district level special education data. A comprehensive report written to the district identifies strengths, recommendations and any noncompliance in all of the areas reviewed during the site visit. Any special education noncompliance identified during the site visit must be corrected as soon as possible, but no later than one year from date of notification.

### Technical Assistance System:

The mechanisms that the State has in place to ensure the timely delivery of high quality, evidenced based technical assistance and support to LEAs.

Iowa’s technical assistance system as distinguished by OSEP, is intricately entwined with Iowa’s professional development system. This section, therefore, describes the structures which support technical assistance and professional development. The activities and strategies used for technical assistance and professional development are explained within the description of Iowa’s professional development system.

Iowa’s technical assistance system has long been a partnership between the Department of Education, AEAS and LEAs. Recently, however, that partnership has reorganized into something known as Collaborating for Iowa’s Kids (C4K). C4K is a partnership among area education agencies, the Iowa Department of Education and local school districts. The intent of C4K is to work more effectively and efficiently as a full educational system to accomplish a few agreed upon priorities within a multi-tiered system of support as a framework to implement Iowa’s rigorous standards. The first areas of focus are early literacy and closing the achievement gaps with the ultimate goal that every child is proficient by the end of third grade.

Collaborating for Iowa’s Kids (C4K) was conceptualized within Iowa’s Area Education Agency system as a way to more effectively work as partners with the Iowa Department of Education (DE) as well as across the AEA system. Established in 2011-12, the partnership includes:

- Collective commitment across AEAs and the DE to work as a unified system;
- Agreement that the role of the DE is to set direction and lead, and the role of the AEAs is to implement;
- Agreement that LEAs are integral, and need to be included in C4K; and
- Commitment to focus efforts and resources on selected priorities.

C4K accomplishes broad stakeholder involvement through a complex set of structures, including: governance teams (oversight, work, task, and implementation teams), external coaches and building leadership teams. These new structures have provided leverage in four ways: (1) Alignment of resources, including fiscal and personnel, focused on one priority (literacy) across priority areas that have the greatest success across children/youth (work teams); (2) Collaboration of the DE, AEA and LEAs as part of C4K; (3) Identification/development of evidence-based frameworks, strategies and programs by experts in the field regardless of affiliation or location; and (4) Intentional statewide scaling based on implementation science.

### Professional Development System:

The mechanisms the State has in place to ensure that service providers have the skills to effectively provide services that improve results for students with disabilities.

Using the structures described above, Iowa employs its own model of professional development, established from evidence based practices of professional learning. The Iowa Professional Development Model (IPDM) is an integrated cycle of planning, ongoing implementation and evaluation. It emphasizes ongoing support and feedback for the learning and application of new skills. Iowa Administrative Code requires each district’s professional development plans to meet the following standards:

1. Align with the Iowa teaching standards and criteria;
2. Deliver research-based instructional strategies aligned with the student achievement goals established by the district;
3. Deliver professional development training and learning opportunities that are targeted at improvement of instruction and designed with the following components:
   - Student achievement data and analysis.
Theory about learning and instruction;
- Classroom demonstration and practice;
- Classroom observation and self-reflection;
- Teacher collaboration and study of teacher implementation; and
- Integration of instructional technology, if applicable;

4. Include an evaluation component of professional development that measures improvement in instructional practice and its impact on student learning; and

5. Support the professional development needs of district certified staff responsible for instruction.

Stakeholder Involvement: [ ] apply this to all Part B results indicators

The mechanism for soliciting broad stakeholder input on targets in the SPP, including revisions to targets.

The State developed the Part B Annual Performance Report (APR) reviewing baseline data, targets and improvement activities, and drafting a report for each indicator. Once draft indicator reports were written, stakeholder groups provided input regarding these three components and comments were compiled. Stakeholder groups included Iowa Department of Education staff, the Learning Supports Advisory Team, the Area Education Agencies (AEA) administration, the Parent-Educator Connection (PEC), and the state Special Education Advisory Panel (SEAP).

Iowa’s Special Education Advisory Panel (SEAP) is the ultimate mechanism for stakeholder recommendations on targets in the SPP, including revisions. SEAP meets seven times a year and has organized those meetings so that discussion regarding indicators occurs throughout the year. Iowa Department of Education staff with responsibility for specific indicators work with relevant stakeholders to develop, implement and refine improvement activities. Input and feedback from the stakeholders implementing improvement activities is shared by the State to SEAP for final consideration. Relevant stakeholders include: parents, general and special education teachers, local administrators and building leaders, AEA consultants and administrators, Iowa Vocational Rehabilitation counselors and administrators, representatives from Institutes of Higher Education and other state and community organizations.

Reporting to the Public:

How and where the State reported to the public on the FFY 2013 performance of each LEA located in the State on the targets in the SPP/APR as soon as practicable, but no later than 120 days following the State’s submission of its FFY 2013 APR, as required by 34 CFR §300.602(b) (1)(i)(A); and a description of where, on its Web site, a complete copy of the State’s SPP, including any revision if the State has revised the SPP that it submitted with its FFY 2013 APR in 2015, is available.

The State will report to the public progress and/or slippage in meeting the “measurable and rigorous targets” found in the SPP/APR by posting on the State of Iowa Department of Education website (https://www.educateiowa.gov/pk-12/special-education/state-requirements-reports) sometime after Feb 1, 2016 but no later than April 1, 2016, the FFY 2014 (2014-2015) APR submitted to OSEP. Any changes to the SPP accepted by OSEP will be posted within 30 days of receipt of the FFY 2014 (2014-2015) response letter to Iowa expected for receipt prior to July 1, 2016.

Performance of AEAs and LEAs on appropriate indicators will be posted by June 1, 2016.

AEA profiles are posted at: https://www.educateiowa.gov/pk-12/special-education/data-profiles

District profiles are posted at: https://www.educateiowa.gov/pk-12/special-education/data-profiles

Iowa’s Accountability Workbook is available at: https://www.educateiowa.gov/documents/pk-12/2013/04/iowas-accountability-workbook-revised-february-15-2011

Graduation Conditions Field

Provide the four-year graduation cohort rate. The four-year graduation rate follows a cohort, or a group of students, who begin as first-time 9th graders in a particular school year and who graduate with a regular high school diploma in four years or less. An extended-year graduation rate follows the same cohort of students for an additional year or years. The cohort is "adjusted" by adding any students transferring into the cohort and by subtracting any students who transfer out, emigrate to another country, or die during the years covered by the rate.

Under 34 C.F.R. §200.19(b)(1)(iv), a "regular high school diploma" means the standard high school diploma awarded to students in a State that is fully aligned with the State's academic content standards and does not include a GED credential, certificate of attendance, or any alternative award. The term "regular high school diploma" also includes a "higher diploma" that is awarded to students who complete requirements above and beyond what is required for a regular diploma.

Graduation in the State of Iowa is defined as (1) a student who has received a regular diploma who completed all unmodified district graduation requirements in the standard number of four years, or (2) students receiving a regular diploma from an alternative placement within the district, or who have had the requirements modified in accordance with a disability. Students who have finished the high school program but did not earn a diploma, or earned a certificate of attendance or other credential in lieu of a diploma are not considered graduates (Iowa NCLB Accountability Workbook).

Data for this measure are reported using the Title I cohort graduation rate. The four-year fixed cohort graduation rate is calculated by dividing the number of students in the cohort (denominator) who graduate with a regular high school diploma in four years or less by the number of first-time 9th graders enrolled in the fall four years earlier minus the number of students who transferred out plus the total number of students who transferred in.

Please note that data reported for the current reporting period are from one year previous as described in the table below.

Title I Cohort Graduation Rate = (FG + TIG) / (F + TI - TO)

FG First-time 9th grade students in fall of 2009 and graduated in 2013 or sooner
TIG Students who transferred in grades 9 to 12 and graduate in 2013 or sooner
F First-time 9th grade students in fall of 2009
TI Transferred in the first-time 9th graders’ cohort in grades 9 to 12
TO Transfer out (including emigrates and deceased)

First-time freshmen and transferred-in students include: resident students attending a public school in the district; non-resident students open-enrolled in, whole-grade sharing in, or tuition in; and foreign students on Visa. Those excluded are: home-schooled and nonpublic schooled students; public school students enrolled in another district but taking courses on a part-time basis; and foreign exchange students.

Students receiving regular diplomas are included as graduates in the numerator. Early graduates are included in the original cohort. All students who take longer to graduate (including students with IEPs) are included in the denominator but not in the numerator for the four-year rate.

The five-year fixed cohort graduation rate, or extended rate, is calculated using a similar methodology as the four-year fixed cohort rate. This rate is calculated by dividing the number of students in the cohort (denominator) who graduate with a regular high school diploma in five years or less by the number of first-time 9th graders enrolled in the fall minus the number of students who transferred out plus the total number of students who transferred in. The five-year fixed cohort rate will maintain the same denominator as the previous year’s four-year cohort rate, simply adding students who graduate in the fifth year to the numerator.

Indicator 3A: Districts Meeting AYP/AMO for Disability Subgroup

Monitoring Priority: FAPE in the LRE

Results indicator: Participation and performance of children with IEPs on Statewide assessments:

A. Percent of the districts with a disability subgroup that meets the State’s minimum "n" size that meet the State’s AYP/AMO targets for the disability subgroup.
B. Participation rate for children with IEPs.
C. Proficiency rate for children with IEPs against grade level, modified and alternate academic achievement standards.

**Explanation of Group G Slippage**

**Public Reporting Information**

Provide links to the page(s) where you provide public reports of assessment results.

**Actions required in FFY 2013 response**

None

**OSEP Response**

The State’s FFY 2014 data represent slippage from the FFY 2013 data for high school reading and high school math, and the State did not meet its FFY 2014 high school targets for this indicator. The State did not, as required, provide an explanation of slippage.

**Required Actions**

None
## Indicator 3C: Proficiency for Students with IEPs

### Monitoring Priority: FAPE in the LRE

### Results indicator: Participation and performance of children with IEPs on Statewide assessments:

- **A.** Percent of the districts with a disability subgroup that meets the State’s minimum "n" size that meet the State’s AYP/AMO targets for the disability subgroup.
- **B.** Participation rate for children with IEPs.
- **C.** Proficiency rate for children with IEPs against grade level, modified and alternate academic achievement standards.

**Explanation of Group A Slippage**

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of reading for kindergarten through grade 8.

**Explanation of Group D Slippage**

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of reading for kindergarten through grade 8.

**Explanation of Group F Slippage**

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of reading for kindergarten through grade 8.

**Explanation of Group A Slippage**

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of math for kindergarten through grade 8.

**Explanation of Group D Slippage**

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of math for kindergarten through grade 8.
Explanation of Group B Slippage

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of math for kindergarten through grade 8.

Explanation of Group C Slippage

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of math for kindergarten through grade 8.

Explanation of Group D Slippage

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of math for kindergarten through grade 8.

Explanation of Group E Slippage

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of math for kindergarten through grade 8.

Explanation of Group F Slippage

The State attributes slippage to a lack of coordinated services and standards throughout the state. While Iowa has adopted the Common Core Standards in English Language Arts and Mathematics it is still in the beginning stages of implementing these standards. A lack of consistent standards and instructional practices across the LEAs has attributed to the lack of progress. The State is addressing this issue with a new RTI database and the consistent use of universal screening and progress monitoring assessments. Standards-based IEP goals will be used to ensure rigorous targets in the area of math for kindergarten through grade 8.

Indicator 4A: Suspension/Expulsion

Monitoring Priority: FAPE in the LRE

Results indicator: Rates of suspension and expulsion:

A. Percent of districts that have a significant discrepancy in the rate of suspensions and expulsions of greater than 10 days in a school year for children with IEPs; and

B. Percent of districts that have: (a) a significant discrepancy by race or ethnicity in the rate of suspensions and expulsions of greater than 10 days in a school year for children with IEPs; and (b) policies, procedures or practices that contribute to the significant discrepancy and do not comply with requirements relating to the development and implementation of IEPs, the use of positive behavioral interventions and supports, and procedural safeguards.

</table>

Explanation of Slippage

Iowa did not meet the measurable and rigorous target for Indicator 4A for the current reporting period using the same data reported under IDEA section 618.

The target was not met for the percent of districts that have a significant discrepancy in the rate of suspensions and expulsions of greater than 10 days in a school year for children with IEPs. The percentage increased from 1.45 to 1.76. The State attributes the increase in districts identified to annual fluctuations in data. Slippage on this indicator is attributed to a significant decrease in the number of districts in the state.
The State DID NOT identify noncompliance with Part B requirements as a result of the review required by 34 CFR §300.170(b).

The State did NOT ensure that such policies, procedures, and practices were revised to comply with applicable requirements consistent with OSEP Memorandum 09-02, dated October 17, 2008.

State’s definition of “significant discrepancy” and methodology

The State’s definition of significant discrepancy is 2.00% above the state average in the rate of suspensions and expulsions of children with disabilities for greater than 10 days in a school year. The state uses both in-school and out-of-school suspensions as well as expulsions in making this calculation.

In-school and out-of-school suspension are both defined as an “administrative or school board removal of a student from school classes or activities for disciplinary reasons,” with a student still being under the supervision of school officials during an in-school suspension. Expulsion is defined as “a school board removal of a student from school classes and activities for disciplinary reasons,” (Collecting and Reporting Juvenile Incident and Discipline Data in Iowa Schools, 2006).

The percent of districts with significant discrepancy is calculated by (1) identifying districts 2.00% or more above the state average in the rate of suspensions and expulsions of children with disabilities for greater than 10 days in a school year, (2) dividing the number of districts with this significant discrepancy by the total number of districts in the state, and (3) multiplying by 100.

Iowa does not determine a district to have a significant discrepancy unless the district has a minimum of ten students with disabilities enrolled.

None

FFY 2013 Identification of Noncompliance

Description of review

Districts identified as significantly discrepant participate in a district review consisting of the following areas relating to discipline/suspensions and expulsions: (1) A review and examination of district discipline data, (2) A review of policies, procedures and practices, (3) A review of documents (i.e., individual IEPs, student handbook to ensure alignment with board polices, etc.), (4) A review of the district Positive Behavioral Interventions and Supports, and (5) The development of a Corrective Action Plan, if necessary.

The State DID NOT identify noncompliance with Part B requirements as a result of the review required by 34 CFR §300.170(b).

The State did NOT ensure that such policies, procedures, and practices were revised to comply with applicable requirements consistent with OSEP Memorandum 09-02, dated October 17, 2008.

Describe how the State ensured that such policies, procedures, and practices were revised to comply with applicable requirements consistent with OSEP Memorandum 09-02, dated October 17, 2008.

Completed reviews (self-assessment) and the Corrective Action Plan are reviewed by the State and a desk audit is conducted to verify findings. The desk audit consists of the review of individual IEPs, review of documents (i.e., prior written notice, change in placement and manifestation determinations, functional behavioral assessments, behavior intervention plans, etc.). A final determination of findings is made by the State and a review of the Corrective Action Plan is conducted to ensure policies, procedures, and practices were revised to comply with applicable requirements.

The State DID identify noncompliance with Part B requirements as a result of the review required by 34 CFR §300.170(b). If YES, select one of the following:

The State DID ensure that such policies, procedures, and practices were revised to comply with applicable requirements consistent with OSEP Memorandum 09-02, dated October 17, 2008.
Correction of Findings of Noncompliance Identified in FFY 2013

**FFY 2013 Findings of Noncompliance Verified as Corrected**

*Describe how the State verified that the source of noncompliance is correctly implementing the regulatory requirements*

Completed reviews (self-assessment) and the Corrective Action Plan are reviewed by the State and a desk audit is conducted to verify findings. The desk audit consists of the review of individual IEPs, review of documents (i.e., prior written notice, change in placement and manifestation determinations, functional behavioral assessments, behavior intervention plans, etc.). A final determination of findings is made by the State and a review of the Corrective Action Plan is conducted to ensure policies, procedures, and practices were revised to comply with applicable requirements.

*Describe how the State verified that each individual case of noncompliance was corrected*

The State (a) reviewed and revised policies, procedures and practices relating to the development and implementation of IEPs, the use of positive behavioral interventions and supports, and procedural safeguards, (b) reviewed and/or revised procedures for giving parents prior written notice for students involved in change of placements consistent with the discipline provisions of IDEA 2005, and (c) reviewed and revised district policies, procedures and practices regarding the discipline provisions of IDEA 2005. The State determined that districts were considered noncompliant in this area primarily due to lack of (a) review and revision of policies, procedures and practices relating to the development and implementation of IEPs, (b) the use of positive behavioral interventions and supports (PBIS), and procedural safeguards, and (c) training of staff regarding the discipline provisions of IDEA 2005 and PBIS. As part of a corrective action plan, districts are required to provide evidence to the State that any required corrections were completed and when the corrections were completed. The State also verified that in each program for which noncompliance was identified, the specific regulatory requirements were being correctly implemented by ensuring that the LEA had adopted and been trained in statewide procedures for the development and implementation if IEPs that are aligned with Iowa’s Special Education Rules, Iowa Code, and Federal Code. Monitoring of corrective actions is carried out by the State’s monitoring consultant.

Explanation of Slippage

Iowa did not meet the measurable and rigorous target for Indicator 4B for the current reporting period using the same data reported under IDEA section 618.

The target was not met for the percent of districts that have: (a) a significant discrepancy, by race or ethnicity, in the rate of suspensions and expulsions of greater than 10 days in a school year for children with IEPs; and (b) policies, procedures or practices that contribute to the significant discrepancy and do not comply with requirements relating to the development and implementation of IEPs, the use of positive behavioral interventions and supports, and procedural safeguards. The percentage increased from 0.30 to 2.05. The State attributes the increase in districts identified to annual fluctuations in data. Slippage on this indicator is attributed to a significant decrease in the number of districts in the state.

☑ All races and ethnicities were included in the review

State’s definition of “significant discrepancy” and methodology

7/18/2016
**State Identification of Noncompliance**

The State’s definition of significant discrepancy is 2.00% above the state average in the rate of suspensions and expulsions of children with disabilities for greater than 10 days in a school year. The state uses both in-school and out-of-school suspensions as well as expulsions in making this calculation.

In-school and out-of-school suspension are both defined as an “administrative or school board removal of a student from school classes or activities for disciplinary reasons,” with a student still being under the supervision of school officials during an in-school suspension. Expulsion is defined as “a school board removal of a student from school classes and activities for disciplinary reasons,” (Collecting and Reporting Juvenile Incident and Discipline Data in Iowa Schools, 2006).

The percent of districts with significant discrepancy is calculated by (1) identifying districts 2.00% or more above of the state average in the rate of suspensions and expulsions of children with disabilities for greater than 10 days in a school year by race/ethnicity, (2) dividing the number of districts with this significant discrepancy by the total number of districts in the state, and (3) multiplying by 100.

Iowa does not determine a district to have a significant discrepancy unless the district has a minimum of ten students with disabilities enrolled.

**FFY 2013 Findings of Noncompliance Verified as Corrected**

Describe how the State verified that the source of noncompliance is correctly implementing the regulatory requirements

Completed reviews (self-assessment) and the Corrective Action Plan are reviewed by the State and a desk audit is conducted to verify findings. The desk audit consists of the review of individual IEPs, review of documents (i.e., prior written notice, change in placement and manifestation determinations, functional behavioral assessments, behavior intervention plans, etc.). A final determination of findings is made by the State and a review of the Corrective Action Plan is conducted to ensure policies, procedures, and practices were revised to comply with applicable requirements.
were revised to comply with applicable requirements.

Describe how the State verified that each individual case of noncompliance was corrected

The State (a) reviewed and revised policies, procedures and practices relating to the development and implementation of IEPs, the use of positive behavioral interventions and supports, and procedural safeguards, (b) reviewed and/or revised procedures for giving parents prior written notice for students involved in change of placements consistent with the discipline provisions of IDEA 2005, and (c) reviewed and revised district policies, procedures and practices regarding the discipline provisions of IDEA 2005. The State determined that districts were considered noncompliant in this area primarily due to lack of (a) review and revision of policies, procedures and practices relating to the development and implementation of IEPs, (b) the use of positive behavioral interventions and supports (PBIS), and procedural safeguards, and (c) training of staff regarding the discipline provisions of IDEA 2005 and PBIS. As part of a corrective action plan, districts are required to provide evidence to the State that any required corrections were completed and when the corrections were completed. The State also verified that in each program for which noncompliance was identified, the specific regulatory requirements were being correctly implemented by ensuring that the LEA had adopted and been trained in statewide procedures for the development and implementation if IEPs that are aligned with Iowa's Special Education Rules, Iowa Code, and Federal Code. Monitoring of corrective actions is carried out by the State's monitoring consultant.

OSEP Response

Because the State reported less than 100% compliance (greater than 0% actual target data for this indicator) for FFY 2014, the State must report on the status of correction of noncompliance identified in FFY 2014 for this indicator.

The State must demonstrate, in the FFY 2015 SPP/APR, that the districts identified with noncompliance in FFY 2014 have corrected the noncompliance, including that the State verified that each district with noncompliance: (1) is correctly implementing the specific regulatory requirement(s) (i.e., achieved 100% compliance) based on a review of updated data such as data subsequently collected through on-site monitoring or a State data system; and (2) has corrected each individual case of noncompliance, unless the child is no longer within the jurisdiction of the district, consistent with OSEP Memo 09-02. In the FFY 2015 SPP/APR, the State must describe the specific actions that were taken to verify the correction.

If the State did not identify any findings of noncompliance in FFY 2014, although its FFY 2014 data reflect less than 100% compliance (greater than 0% actual target data for this indicator), provide an explanation of why the State did not identify any findings of noncompliance in FFY 2014.

Required Actions
Indicator 5: Education Environments (children 6-21)

**Monitoring Priority:** FAPE in the LRE

**Results indicator:** Percent of children with IEPs aged 6 through 21 served:

A. Inside the regular class 80% or more of the day;
B. Inside the regular class less than 40% of the day; and
C. In separate schools, residential facilities, or homebound/hospital placements.

**Explanation of A Slippage**

Iowa did not meet the measurable and rigorous target for one of the two settings under Indicator 6 for the current reporting period using the same data reported under IDEA section 618.

The target was not met for number of children with IEPs aged 3 through 5 enrolled in a regular early childhood program and receiving the majority of special education and related services in the regular early childhood program. The percent decreased from 35.78 percent during the prior reporting period to 34.36 percent.

Slippage on this indicator is attributed to an increase in the percent of children receiving the majority of special education services in other locations. Further analysis of the data revealed systemic statewide challenges in embedding special education services into the regular early childhood programs. Although there was an increase in the percent of children participating in regular early childhood programs, special education services were not routinely being provided within the context of the learning opportunities and social interactions occurring within these settings. The State found that the majority of the services students were receiving in other locations were support and related special education services.

**Actions required in FFY 2013 response**

None

**OSEP Response**

**Required Actions**
**Indicator 7: Preschool Outcomes**

**Monitoring Priority: FAPE in the LRE**

Results indicator: Percent of preschool children aged 3 through 5 with IEPs who demonstrate improved:

A. Positive social-emotional skills (including social relationships);
B. Acquisition and use of knowledge and skills (including early language/ communication and early literacy); and
C. Use of appropriate behaviors to meet their needs.

Describe how the State has ensured that any response data are valid and reliable, including how the data represent the
Selection bias was avoided to the largest possible extent by randomizing the selection of participants, giving the contact information of potential participants to personnel administering the survey in random order, and providing a script to personnel administering the survey. Response data were then analyzed to determine the extent to which bias based on age, race or gender were pervasive in the data. Results of this assessment are provided in the attached document titled B8 Representativeness. (Please note that Iowa does not collect information on disability category.)

Survey responses that included missing answers or answers marked “not applicable” were included in the data analyses, but the missing data points were not included in either the numerator or denominator in determining the overall opinion of the respondent.

---

Was sampling used?  Yes
Has your previously-approved sampling plan changed?  No

Was a collection tool used?  Yes
Is it a new or revised collection tool?  No

☐ Yes, the data accurately represent the demographics of the State
☐ No, the data does not accurately represent the demographics of the State

Describe the sampling methodology outlining how the design will yield valid and reliable estimates.

In order to obtain the sample for the current reporting period, a representative sample of parents of children with IEPs was drawn from each AEA proportionately by population. Sample size was determined using a 95 percent level of confidence with a 10 percent margin of error. In addition to the necessary sample size, an alternate sample of an additional 30 percent was drawn to be used, if necessary, when repeated attempts to contact the original selected parent(s) failed. The sample was drawn with a high level of confidence in order to ensure representativeness given an adequate response rate, and responses were later assessed for representativeness by age, race and gender. Results of this assessment are provided in the attached document titled B8 Representativeness. (Please note that Iowa does not collect information on disability category.)

---

Actions required in FFY 2013 response

The State did not provide valid and reliable FFY 2013 data this indicator because it did not provide data for school aged children, and the State must provide valid and reliable data based on the required measurement for FFY 2014 in the FFY 2014 APR.

Responses to actions required in FFY 2013 response

No actions were required in FFY 2013 response.

OSEP Response

The State did not provide any 2013 data for this indicator. In the FFY 2013 SPP/APR, the State reported data for preschool and explained that the State "failed to collect valid and reliable data for school aged students." Because the State provided no school-aged FFY 2013 data for this indicator, OSEP could not determine if there was slippage for school-aged.

Required Actions
Indicator 9: Disproportionate Representations

Monitoring Priority: Disproportionate Representations

Compliance indicator: Percent of districts with disproportionate representation of racial and ethnic groups in special education and related services that is the result of inappropriate identification.

Define “disproportionate representation” and describe the method(s) used to calculate disproportionate representation

AEAs are the subrecipients of Part B funds in the state of Iowa and are considered Iowa’s LEAs for the purposes of reporting in the SPP and APR, as reflected in Iowa’s State Eligibility Document on file with OSEP. In addition, because Iowa’s Area Education Agencies carry primary responsibility for conducting child-find activities, data for Indicator 9 were examined at the AEA level.

The paragraphs that follow summarize Iowa’s (a) definition of Disproportionate Representation, (b) measurement strategy for determining disproportionate representation, (c) n size used for calculations, and (d) process for determining if Disproportionate Representation was a result of Inappropriate Identification.

State Definition of Disproportionate Representation. Consistent with the “Disproportionality: Discussion of SPP/APR Response
Table Language” (North Central Regional Resource Center), in response to the OSEP Analysis/Next Steps in the Iowa Part B FFY 2006 SPP/APR Response Table, and in accordance with 34 CFR § 300.600 (d) (3), the SEA defines disproportionate overrepresentation as occurring when the weighted risk ratio or alternate risk ratio is greater than 2.00.

Risk ratios are preferable to the composition index because the size of a risk ratio is not dependent upon the composition of the state or district's total enrollment. In addition, the size of a risk ratio is not dependent on differences in overall special education identification rates. Weighted risk ratios, therefore, can be directly compared across districts and ranked in order to target assistance efforts. The large number of small schools in Iowa with low ethnic enrollment make the weighted risk ratio a more appropriate measurement strategy than a composition index or unweighted risk ratio for disproportionate representation.

The race/ethnicity categories used for analysis were: African American, Hispanic, Asian, American Indian, Pacific Islander, Caucasian, and Multiple Races. The formula for the weighted risk ratio is:

\[
\text{Weighted risk ratio} = \frac{R_i}{\sum_{j \neq i} w_j R_j} = \frac{(1-p_i) R_i}{\sum_{j \neq i} p_j R_j}
\]

where \( R_i \) is the district-level risk for racial/ethnic group \( i \), and \( p_i \) is the state-level proportion of students from racial/ethnic group \( i \). \( R_j \) is the district-level risk for the \( j \)-th racial/ethnic group, and \( p_j \) is the state-level proportion of students from the \( j \)-th racial/ethnic group.

An alternate risk ratio is calculated if there are at least ten students with IEPs in the ethnic group of interest, but fewer than ten students with IEPs in the comparison group. The alternate risk ratio is calculated by modifying the above equation so that the district-level risk for the racial/ethnic group \( R_i \) is divided by the state-level risk for all other students.

Cell Sizes for Calculating Disproportionate Representation. Because of the large number of schools in Iowa with low ethnic enrollment, the cell size used for calculating weighted risk ratio and the alternate risk ratio was set at 10. Iowa believes this “n” is statistically appropriate given the composition of schools in Iowa.

Determining if Disproportionate Representation is Due to Inappropriate Practices.
Iowa has developed a Disproportionality Review that is conducted at the AEA level. The process involves a formal review in which the AEA examines and evaluates the following areas:

- Section 1: Review of Data,
- Section 2: Review of Related Issues and Practices,
- Section 3: Review of Policies, Procedures and Practices,
- Section 4: Technical Assistance/Professional Development, and
- Section 5: Results/Findings

The data review consists of the AEA examining its collection and use of data, (e.g., how data are disaggregated, analyzed, used to make decisions, guide practices, etc.). The review of related issues and practices consists of the examination of key areas that have been identified as impacting the area of disproportionality (e.g., utilization of universal screening; administrator/personnel understanding of special education procedures and requirements regarding referral, evaluation, identification, placement, discipline, LRE; attempts to rule out exclusionary factors during the evaluation process, etc.)

The process also consists of a formal review of policies, procedures and practices regarding the following areas: child find, parent participation, general education interventions, systematic problem-solving process, progress monitoring and data collection, determination of eligibility and evaluations/reevaluations. In addition, the AEA describes the technical assistance and/or professional development that is being conducted at the AEA and in districts regarding and/or related to disproportionality (e.g., differentiation of instruction, progress monitoring, cultural competency, understanding racial biases, etc.).
The AEAs submit the completed review document and findings to the SEA. A team of consultants meet to review and discuss the results and findings. A final determination of whether or not disproportionality is a result of inappropriate identification is made by the SEA.

AEAs identified with noncompliance work in collaboration with the SEA in developing a corrective action plan. Areas of noncompliance are to be corrected as soon as possible, but no later than one year from identification.

Summary of Process Used to Determine if Disproportionality was Due to Inappropriate Practice.

State Policy. The State of Iowa has policies and procedures designed to prevent inappropriate overidentification or disproportionate representation by race and ethnicity of children with disabilities, consistent with 34 CFR § 300.8, 20 U. S. C. 1418 (d), 20 U. S. C 1412 (a) (24), 34 CFR § 300.173. The State of Iowa and has procedures requiring use of a variety of assessment tools and strategies to gather relevant functional, developmental, and academic information, including information provided by the parent, that may assist in determining whether the child is a child with a disability, and the content of the child's IEP, consistent with 20 U. S. C. 1414 (b) (2); 34 CFR § 300.304 (b). The State of Iowa has policies ensuring that assessments and other evaluation materials used to assess a child under 20 U. S. C. 1414 (b) are selected and administered so as not to be discriminatory on a racial or cultural basis, are provided and administered in the language and form most likely to yield accurate information on what the child knows and can do academically, developmentally, and functionally, and other requirements for assessment in all areas of suspected disability, by trained and knowledgeable personnel (20 U. S. C. 1414 (b) (3)); 34 CFR § 300.304 (c). The State of Iowa has policies that determination that the child has a disability and the educational needs of the child shall be made by a group of qualified professionals and the parent, in accordance with § 300.306 (b), 20 U. S. C. 1414 (b) (4), 34 CFR § 300.306 (a). The State of Iowa has policies that, in making a determination of eligibility, a child shall not be determined to be a child with a disability if the determinant factor for such determination is: lack of appropriate instruction in reading, including the essential components of reading instruction (as defined in Section 1208 (3) of the Elementary and Secondary Education Act of 1965); lack of appropriate instruction in math; or limited English proficiency; or if the child does not otherwise meet the eligibility criteria under 34 CFR § 300.8 (a) [20 U. S. C. 1414 (b) (5); 34 CFR § 300.306 (b)]. The State of Iowa has policies that, in interpreting evaluation data for the purpose of determining if a child is a child with a disability under § 300.8, and the educational needs of the child, each public agency must draw upon information from a variety of sources, and ensure that information from all these sources is documented and carefully considered [20 U. S. C. 1414 (c); 34 CFR § 300.306 (c)].

Indicate the evaluation timeline used

☐ The State used the 60 day timeframe within which the evaluation must be conducted.
☐ The State established a timeline within which the evaluation must be conducted.

What is the State’s timeline for initial evaluations?
What is the source of the data provided for this indicator?
- State monitoring
- State database that includes data for the entire reporting year

Describe the method used to collect these data, and if data are from the State’s monitoring, describe the procedures used to collect these data.

Reported data were generated from Iowa’s Information Management System. The data reflect all children and youth in Iowa who were evaluated for determination of eligibility for an IEP, during the current reporting period. The data were entered into the database by trained personnel, using the federal definition for 60-day timeline for evaluation (initial evaluations). The data taken from the monitoring system are based on actual (not an average) number of days.

Iowa uses the date of receipt of consent by the public agency, as the date for starting the 60-day calendar for completion of the evaluation. The State uses date of evaluation as the date for stopping the calendar for calculating the timeline. At all pertinent times, Iowa’s definition of 60-day timeline is identical to the federal definition contained in the 2005 IDEA amendments and the 2007 IDEA regulations.

Describe how the State verified that the source of noncompliance is correctly implementing the regulatory requirements

The State uses data from the state database designed to track special education evaluation and placement data. These data are used to determine the extent to which 60-day timelines are being met statewide, and which AEAs are or are not meeting the 60-day timeline. The State continues to emphasize on the use of verification reports to help meet the timelines.

AEAs below 95 percent compliance are required to write a corrective action plan (CAP) to correct systemic compliance issues. Iowa would like to clarify that the threshold of 95 percent is used only to determine which AEAs are required to write corrective action plans, not to determine noncompliance. Any noncompliance issue falling below 100 percent is cited, corrected, and verified. The State ensures that steps in the corrective action plan are completed by monitoring implementation of the CAP through Iowa’s ISTAR system, assigning personnel to monitor implementation of the CAP, and by verifying implementation through data. All AEAs were above 95 percent compliance for both the current and prior reporting period.

Describe how the State verified that each individual case of noncompliance was corrected

Iowa verified the correction of noncompliance identified during the prior reporting period by (a) verifying that every child for whom consent to evaluate was received subsequently received an evaluation, even if late, unless the child was no longer in the jurisdiction of the LEA, and (b) verifying that each LEA that was performing below 100 percent compliance during the prior reporting period is correctly implementing 34 CFR §300.301(c)(1). Verification of correction of individual noncompliance (Prong 1) occurs in the ISTAR system and state data system in two ways. First, the AEA verifies that for each child for whom the timeline was exceeded, an evaluation was conducted and an IEP was developed in two ways. Then the State verifies the same information on the IEP and in the statewide database system. Child-specific noncompliance is considered "verified" when both steps have been completed. Verification of correct implementation of the regulatory requirement (Prong 2) is done by analyzing updated data in a sample from the state’s data system subsequent to the period during which the noncompliance was found, but within the one-year correction period. To be determined to be correctly implementing the regulatory requirement, an LEA is required to meet 100 percent compliance in a sample of three new evaluations. The time period examined begins six months from notification of findings of noncompliance and ends three months later.
While Iowa was able to verify correction of all noncompliance for prior reporting period, the State has procedures in place should timely correction not take place in the future. Iowa's Administrative Rules of Special Education provide the State with the latitude to take enforcement actions in cases of noncompliance with the IDEA including, but not limited to, requiring a corrective action plan, withholding payments under Part B, and referring the matter for enforcement to the Department of Justice or state auditor. [IAC 281-41.604]

OSEP Response

Because the State reported less than 100% compliance for FFY 2014, the State must report on the status of correction of noncompliance identified in FFY 2014 for this indicator.

When reporting on the correction of noncompliance, the State must report, in the FFY 2015 SPP/APR, that it has verified that each LEA with noncompliance identified in FFY 2014 for this indicator: (1) is correctly implementing the specific regulatory requirements (i.e., achieved 100% compliance) based on a review of updated data such as data subsequently collected through on-site monitoring or a State data system; and (2) has corrected each individual case of noncompliance, unless the child is no longer within the jurisdiction of the LEA, consistent with OSEP Memo 09-02. In the FFY 2015 SPP/APR, the State must describe the specific actions that were taken to verify the correction.

If the State did not identify any findings of noncompliance in FFY 2014, although its FFY 2014 data reflect less than 100% compliance, provide an explanation of why the State did not identify any findings of noncompliance in FFY 2014.

**FFY 2013 Findings of Noncompliance Verified as Corrected**

Describe how the State verified that each individual case of noncompliance was corrected

Iowa verified the correction of noncompliance identified during the prior reporting period by (a) verifying that very child served in Part C and referred to Part B subsequently received an evaluation and – if eligible – a fully developed IEP, even if late, unless the child was no longer in the jurisdiction of the LEA, and (b) verifying that each LEA that was performing below 100 percent compliance during the prior reporting period is correctly implementing 34 CFR §300.124(b). Verification of correction of individual noncompliance (Prong 1) occurs in the ISTAR system and state data system in two ways. First, the AEA verifies that for each child for whom the timeline was exceeded, an evaluation was conducted and an IEP was developed with appropriate services, if eligible. Then the State verifies the same information on the IEP and in the statewide data system. Child-specific noncompliance is considered “verified” when both steps have been completed. Verification of correct implementation of the regulatory requirement (Prong 2) is done by analyzing updated data in a sample from the state’s data system subsequent to the period during which the noncompliance was found but within the one year correction period. To be determined to be correctly implementing the regulatory requirement, an LEA is required to meet 100 percent compliance in a sample of three new evaluations. The time period examined begins six months from notification of findings of noncompliance and ends three months later.

While Iowa was able to verify correction of all noncompliance for the prior reporting period, the state has procedures in place should timely correction not take place in the future. Iowa’s Administrative Rules of Special Education provide the SEA with the latitude to take enforcement actions in cases of noncompliance with the IDEA including, but not limited to, requiring a corrective action plan, withholding payments under Part B, and referring the matter for enforcement to the department of justice or state auditor. [IAC 41.604]
OSEP Response

Because the State reported less than 100% compliance for FFY 2014, the State must report on the status of correction of noncompliance identified in FFY 2014 for this indicator.

When reporting on the correction of noncompliance, the State must report, in the FFY 2015 SPP/APR, that it has verified that each LEA with noncompliance identified in FFY 2014 for this indicator: (1) is correctly implementing the specific regulatory requirements (i.e., achieved 100% compliance) based on a review of updated data such as data subsequently collected through on-site monitoring or a State data system; and (2) has corrected each individual case of noncompliance, unless the child is no longer within the jurisdiction of the LEA, consistent with OSEP Memo 09-02. In the FFY 2015 SPP/APR, the State must describe the specific actions that were taken to verify the correction.

If the State did not identify any findings of noncompliance in FFY 2014, although its FFY 2014 data reflect less than 100% compliance, provide an explanation of why the State did not identify any findings of noncompliance in FFY 2014.

Required Actions
Indicator 13: Secondary Transition

Monitoring Priority: Effective General Supervision Part B / Effective Transition

Compliance indicator: Percent of youth with IEPs aged 16 and above with an IEP that includes appropriate measurable postsecondary goals that are annually updated and based upon an age appropriate transition assessment, transition services, including courses of study, that will reasonably enable the student to meet those postsecondary goals, and annual IEP goals related to the student’s transition services needs. There also must be evidence that the student was invited to the IEP Team meeting where transition services are to be discussed and evidence that, if appropriate, a representative of any participating agency was invited to the IEP Team meeting with the prior consent of the parent or student who has reached the age of majority.

(20 U.S.C. 1416(a)(3)(B))

What is the source of the data provided for this indicator?
- State monitoring
- State database that includes data for the entire reporting year

Describe the method used to collect these data, and if data are from the State’s monitoring, describe the procedures used to collect these data.

In order to obtain the sample for the current reporting year, IEPs were randomly selected at the district level from the population of students with disabilities ages 14 and older in districts in the self-assessment year of Iowa’s school improvement cycle. (Please note that Iowa Code requires that transition planning begin by age 14, rather than age 16, as stipulated by IDEA.) Sample size was determined using a 95 percent confidence interval with a margin of error of +/-10 percent. The sample was drawn with stringent confidence intervals because of the magnitude of decision-making based on the data.

The sample was drawn from districts according to the self-assessment year within Iowa’s school improvement cycle. The improvement cycle ensures that every district is reviewed once every five years.

Data collection team members received training and passed three reliability checks with at least 75 percent accuracy prior to data collection. A response rate of 100 percent was achieved. To meet criteria for Indicator B-13, an IEP must contain all six of the elements listed below.

**Critical Element 1: Interests and Preferences.** Interests and preferences as they relate to post-secondary areas and student invitation to the meeting.
Critical Element 2: Transition Assessments. Assessment information listing specific data and the source of the data for each post-secondary area of living, learning, and working is sufficient to determine that the post-secondary area was assessed.

Critical Element 3: Post-secondary Expectations. A statement for each post-secondary area of living, learning, and working is observable, based on assessment information and projects beyond high school.

Critical Element 4: Course of Study. The course of study must project to the student’s anticipated end of high school, be based on needs and include: 1) a targeted graduation date; 2) the student’s graduation criteria; and 3) any courses or activities the student needs to pursue his/her post-secondary expectations.

Critical Element 5: Annual Goals. All goals must support pursuit of the student’s post-secondary expectations and be well-written and all areas of post-secondary expectations must have a goal or service/activity or the assessment information must clearly indicate there is no need for services in that post-secondary area.

Critical Element 6: Services, supports, and activities. Statements must specifically describe the services, supports and activities necessary to meet the needs identified through the transition assessment. Evidence that adult agencies and community organizations were involved as appropriate must also be present.

Data were collected through Iowa’s System to Achieve Results (ISTAR), certified by AEA staff and validated through the ISTAR system. Selection bias was avoided to the largest possible extent by drawing a representative sample of IEPs at a high level of confidence and conducting the analysis only after weighting the data properly.

Sample data for reporting period were assessed for similarity or difference of the sample to the population of students with disabilities. Results of this assessment are provided in the attached document titled B13 Representativeness. (Please note that Iowa does not collect information on disability category.)

Provide additional information about this indicator (optional)

Iowa did not meet the measurable and rigorous target for Indicator 13 for the current reporting period. Iowa's standard for Indicator 13 requires that an IEP meet all six critical elements. If one or more of the critical elements are missing, the IEP is scored as having not meet the Indicator 13 criteria. While the target was not met, Iowa made significant improvement in the percentage of IEPs meeting all six critical elements having increased from 85.21 percent during the prior reporting period to 87.56 percent.

FFY 2013 Findings of Noncompliance Verified as Corrected

Describe how the State verified that the source of noncompliance is correctly implementing the regulatory requirements

The State uses data from the states monitoring database to track information on compliance with secondary transition requirements. These data are used to determine the extent to which transition requirements are being met statewide, and which AEAs are or are not correctly implementing the requirements. AEAs below 95 percent compliance are required to write a corrective action plan (CAP) to correct systemic compliance issues. Iowa would like to clarify that the threshold of 95 percent is used only to determine which AEAs are required to write corrective action plans, not to determine noncompliance. Any noncompliance issue falling below 100 percent is cited, corrected, and verified. Based on data for the current reporting period, seven AEAs will be required to write a corrective action plan. The State ensures that steps in the corrective action plan are completed by monitoring implementation of the CAP through Iowa’s ISTAR system, assigning State personnel to monitor implementation of the CAP, and by verifying implementation through data.

Describe how the State verified that each individual case of noncompliance was corrected

Iowa verified the correction of noncompliance identified during the prior reporting period by (a) verifying that every instance of child-specific noncompliance was subsequently corrected on the IEP and (b) verifying that each LEA that was performing below 100% compliance during the prior reporting period is correctly implementing 34 CFR §§300.320(b) and 300.321(b). Verification of correction of individual noncompliance (Prong 1) occurs in the ISTAR monitoring system. First, the district verifies that for each child for whom the transition requirements were not met, all required corrections have been made on the IEP. Then the AEA verifies the same information on the IEP. Child-specific noncompliance is considered “verified” when both steps have been completed. Verification of correct implementation of the regulatory requirement (Prong 2) is done by analyzing updated data in a sample of IEPs subsequent to the time during which the noncompliance was found, but within the one-year correction period. To be determined to be correctly implementing the regulatory requirement, an district or AEA is required to meet 100% compliance in a sample of three new transition file reviews. The time period examined begins six months from notification of findings of noncompliance and ends three months later. While Iowa was able to verify correction of all noncompliance for prior reporting period, the state has procedures in place should timely correction not take place in the future. Iowa’s Administrative Rules of Special Education provide the State with the latitude to
take enforcement actions in cases of noncompliance with the IDEA including, but not limited to, requiring a corrective action plan, withholding payments under Part B, and referring the matter for enforcement to the Department of Justice or state auditor. [IAC 21.604]

OSEP Response

Because the State reported less than 100% compliance for FFY 2014, the State must report on the status of correction of noncompliance identified in FFY 2014 for this indicator.

When reporting on the correction of noncompliance, the State must report, in the FFY 2015 SPP/APR, that it has verified that each LEA with noncompliance identified in FFY 2014 for this indicator: (1) is correctly implementing the specific regulatory requirements (i.e., achieved 100% compliance) based on a review of updated data such as data subsequently collected through on-site monitoring or a State data system; and (2) has corrected each individual case of noncompliance, unless the child is no longer within the jurisdiction of the LEA, consistent with OSEP Memo 09-02. In the FFY 2015 SPP/APR, the State must describe the specific actions that were taken to verify the correction.

If the State did not identify any findings of noncompliance in FFY 2014, although its FFY 2014 data reflect less than 100% compliance, provide an explanation of why the State did not identify any findings of noncompliance in FFY 2014.

Required Actions
Indicator 14: Post-School Outcomes

Monitoring Priority: Effective General Supervision Part B / Effective Transition

Results indicator: Percent of youth who are no longer in secondary school, had IEPs in effect at the time they left school, and were:

A. Enrolled in higher education within one year of leaving high school.
B. Enrolled in higher education or competitively employed within one year of leaving high school.
C. Enrolled in higher education or in some other postsecondary education or training program; or competitively employed or in some other employment within one year of leaving high school.

**Description of A Slippage**

Iowa did not meet the measurable and rigorous target for Indicator 14A for the current reporting period. The percentage of students enrolled in higher education decreased from 33.51 percent during the prior reporting period to 30.71 percent. The State attributes this slippage to annual fluctuations in the data.

**Was sampling used?** Yes  
**Has your previously-approved sampling plan changed?** No

Describe the sampling methodology outlining how the design will yield valid and reliable estimates.

District sampling procedures. Part B Indicator 14 data is collected as part of Iowa’s compliance monitoring cycle, which begins with the submission of a Comprehensive School Improvement Plan in Year 1 and culminates with a site visit in Year 5. Each of Iowa’s 346 districts is required to address all components of the compliance cycle within a five-year period. Indicator B14 data are collected in Year 4 of the compliance cycle through the administration of the one-year follow-up survey. Districts are required to participate in the One Year Follow-up Interview. To ensure a balanced representation of the State across each year of the 5-Year cycle, the Department of Education hired Dr. Michael Larsen as an advisor. Dr. Larsen has a doctorate in statistics from Harvard University and is a professor in statistics at Iowa State University. He has worked at Stanford University, Gallup, The U.S. Bureau of Census and the University of Chicago and is eminently qualified to advise the Department. Dr. Larsen’s analysis of district assignments to the school improvement schedule indicated that the overall State representation is balanced across the years. However, slight adjustments in districts’ assigned years would improve distributions across the years for comparisons within an area education agency (AEA). Dr. Larsen also advised that weighting procedures done in analysis could also remedy the slight imbalance for an AEA analysis across years. Weighting the results will also allow for a representative sample across Iowa including race / ethnicity and gender. The Department of Education decided to maintain the district assigned schedule and account for imbalances in the weighted analysis within AEs. State results will also be adjusted using weighting and aggregation across years since there is not a probability sample using the established school improvement cycle. Student sampling procedures. Data were collected from two groups of former students: those who had IEPs in high school and those who did not have IEPs in high school. Sample selection procedures were established so that district data are representative of the districts and can be used for district improvement. Sample size was determined based on a 95% confidence interval with a margin of error of not more than 0.05. All students in the class who had IEPs were selected for the district’s sample. Districts with more than one high school (n=8 districts) were sampled at the high school level. Sampling of students occurred if the group (IEP, or no IEP) had 70 or more students. If the district had less than 70 students in a group, all students were selected for participation. Instrumentation. The One-Year follow-up survey consisted of 55 questions regarding participant perceptions of high school, employment status, living arrangements, and postsecondary enrollment status. The survey instrument was developed from a synthesis of published research. (Bruininks, Lewis, & Thurlow, 1988; Hasazi, Gordon, & Roe, 1985; Kortering & Edgar, 1988; Mithaug, Horuchi, & Fanning, 1985; Sitlington & Frank, 1990; Wehman, Kergel, & Seyfarth, 1985; Wagner, 1993.) Procedures. The One-Year follow-up survey is administered in Year 4 of the Compliance Monitoring Cycle. It is conducted through a phone interview with the former student or their family member. Persons conducting the interview are contracted personnel who have been trained to collect the information. Treatment of non-respondents. Several procedures have been established to minimize the number of non-respondents. First, seniors are asked to provide names and phone numbers where they might be reached one year after high school. Second, contracted staff are instructed to make three attempts to contact individuals. Analysis of data. Data were collected via Iowa’s System to Achieve Results (ISTAR), the state’s web-based monitoring database, and submitted to the SEA, where they were validated. Missing data and outliers were flagged and verified. Response data for the survey were weighted appropriately by district size to correct for the exclusion of some districts from the sample during each year of the Compliance Monitoring Cycle. Selection bias was avoided to the largest possible extent by drawing a representative sample of participants at a high level of confidence and conducting the analysis only after weighting the data properly. Sample data for reporting period were assessed for similarity or difference of the sample to the population of students with disabilities exiting school. Results of this assessment are provided in the attached document titled B14 Representativeness.

Description of Measure

Proficiency rate percent = [(# of children with IEPs in third grade scoring at or above benchmark on a valid and reliable screening assessment, based on the assessment criterion cut point) divided by the (total # of children with IEPs in third grade who took the assessment and for whom a proficiency level was assigned)]. The proficiency rate includes both children with IEPs enrolled for a full academic year and those not enrolled for a full academic year.

Formative Assessment System for Teachers (FAST) is the valid and reliable screening assessment that Iowa will use to set and achieve targets. FAST is a suite of assessments. For the purposes of statewide improvement of Specially Designed Instruction, Iowa will be monitoring growth using the adaptive Reading (aReading) measure. This measure is administered as early as the winter of kindergarten and through high school. It is a computer-adapted test that allows for the individualization of the assessment based on student skills. Therefore, if a third grader is reading two years below grade level, the test will pinpoint skills at that level. Additionally, because FAST aReading is administered via computer, accommodations are readily available for learners who need them. Reliability and validity data for FAST aReading indicate that it is highly predictive of reading outcomes and results are correlated with other standardized reading assessments. Additionally, reliability and validity in administration and scoring of the assessment is assured via built in online training, practice, and certification on both administration and scoring components of the assessments.

Targets: Description of Stakeholder Input

Iowa’s Part B State Systemic Improvement Plan (SSIP) is the product of many contributors including parents, individuals with disabilities, teachers, principals, local directors of special education, area education agency (AEA) content consultants, area education agency (AEA) directors of special education, Iowa’s Special Education Advisory Panel (SEAP), IHEs and Iowa Department of Education (DOE) staff including special education, Title I, and school improvement consultants. Involvement of these participants took many forms and, to the extent possible, was incorporated through existing groups and activities rather than as an extraneous activity.

Primary conceptualization, review of data, sorting of small-group input and making of recommendations was accomplished by Iowa’s Special Education Advisory Panel (SEAP). Iowa’s SEAP has thirty-one members and includes representation from individuals with disabilities, parents of learners with disabilities, special educators, district special education administrators, area education agency special education directors, Iowa’s Parent Training and Information Center, Disability Rights Iowa, institutes of higher education and state agencies including juvenile justice, Iowa Vocational Rehabilitation Services, Iowa Department of Human Services, and Iowa Department for the Blind. This group is extremely inclusive and collaborative, as evidenced by its rotating leadership. The current chair of SEAP is a Work Experience Coordinator from a small rural district and next year’s chair is an instructional coach for a large Iowa district. Recent past chairs have been the director of Iowa’s Parent Training and Information Center (PTI) and a parent of an adolescent with a disability.

Each component of Phase 1 of the SSIP (i.e., 1. Data Analysis, 2. Selection of the State Identified Measureable Result, 3. Analysis of State Infrastructure, 4. Selection of Coherent Improvement Strategies, and 5. Theory of Action) began with SEAP’s conceptualization of the activities needed to accomplish the component. As activities were completed, information was brought back to SEAP for discussion, refinement and consideration for SSIP recommendations.

Input on all SEAP recommendations was sought from the AEA Directors of Special Education and the Department of Education Special Education Team. This input was then considered by a DOE internal SSIP team for a final decision on the SSIP component. The internal DOE SSIP team included the Chief of the Bureau of Learning Supports and Strategies, the Chief of the School Improvement Bureau, the State Director of Special Education, Iowa’s Part C Coordinator, Parts C and B Data Coordinators, Iowa’s 619...
Overview

Data Analysis

A description of how the State identified and analyzed key data, including data from SPP/APR indicators, 618 data collections, and other available data as applicable, to: (1) select the State-identified Measurable Result(s) for Children with Disabilities, and (2) identify root causes contributing to low performance. The description must include information about how the data were disaggregated by multiple variables (e.g., LEA, region, race/ethnicity, gender, disability category, placement, etc.). As part of its data analysis, the State should also consider compliance data and whether those data present potential barriers to improvement. In addition, if the State identifies any concerns about the quality of the data, the description must include how the State will address these concerns. Finally, if additional data are needed, the description should include the methods and timelines to collect and analyze the additional data.

SEAP began the formal process for developing Iowa’s SSIP in Fall, 2013 by changing the conversations around SPP/APR Indicators. Instead of separately reviewing the target for each indicator, the indicators were clustered within the broad goals of the Iowa Department of Education. Deep discussion was held to identify the extent to which learners who receive special education services achieve the following desired results:

- Enter kindergarten ready to learn to read.
- Are proficient readers by the end of 3rd grade.
- Progress at a rate that ensures success across core content areas.
- Are engaged in school and community.
- Graduate from high school.
- Are college and career ready.

Rich conversations were held for each of these goals, beginning with a review of existing data. SEAP members identified those data that seemed most compelling and data that were not relevant or strong enough to form the basis of decisions. Discussion also identified those areas with activities and strategies linked to infrastructure support and those areas that were lacking. DOE staff with assignments relevant to each result area contributed to discussions specific to their topical expertise. This year-long conversation resulted in narrowing the identification of a measurable result to two potential areas: 1. Proficient readers by the end of 3rd grade and 2. Graduate from high school ready for college and career.

These two areas were then presented to a number of small groups to get their preferences and insights. These small groups included: AEA special education directors, Urban Education Network Special Education Directors, and DOE Special Education Team members. While all found graduation from high school ready for college and career compelling, most felt that the state was better poised for deeper data analysis and infrastructure support to ensure learners with disabilities are proficient readers by the end of 3rd grade. SEAP members reviewed this input and their previous analysis in each of the six goals and thus, Iowa’s identified measurable result is that all learners who receive special education services achieve the following desired results:

- Enter kindergarten ready to learn to read.
- Are proficient readers by the end of 3rd grade.
- Graduate from high school ready for college and career.

Analysis of proficiency and growth on state reading assessments. Further analysis of the proficiency and growth on state reading assessments was completed by a state-wide group with broad data experience. The state data group included an AEA special education director, school psychologists, school improvement consultant, assessment consultant, a DOE administrative consultant for education data and the state director of special education. This group focused on identification of a growth model and examined data related to growth on statewide proficiency assessments. The group decided to use the same growth model proposed by the Attendance Center Rankings Committee which was established as a result of state legislation. This growth indicator is based primarily on a college and career ready target and trajectory. Using this model, an individual growth goal is generated for each student based on their last year and current year Iowa National Standard Score. If the student is already above the trajectory, the growth goal will be the annual increase in normative or observed growth at the 50th percentile for the student’s current grade. For those students below the trajectory, their growth
goal will mean learning more than a year's set of information. Data from the 2013-14 state assessments grades 3-8 and 11 were disaggregated at the building level, district level, and AEA level. They were also disaggregated at the state level according to percent time spent in general education environment. The information gathered by this group was shared with the AEA directors of special education, along with preliminary findings, including:

- Statewide, 69% of students with IEPs also received Free and Reduced Lunch (FRL). Distribution in LEAs and AEAs varied greatly.
- There was no significant difference in reading proficiency or reading progress between those students who had an IEP and those students who had an IEP and received a free and reduced lunch.
- Although a gap exists between the percentage of students without IEPs who make progress and those with IEPs who make progress, it is considerably less than the reading proficiency gap (e.g., gap of 13.75% for those who made progress between 2012-13 and 2013-14 versus a 42.34% gap in reading proficiency in 2013-14).
- Reading proficiency was not a significant factor in students with IEPs meeting individual growth trajectories. For example, between the 2012-13 school year and the 2013-14 school year, 43.24% of IEP students who were proficient met their growth trajectories. During this same time period, 41.21% of IEP students who were not proficient met their growth trajectories.
- Preliminary review of LRE data and percentage of students meeting their growth trajectories suggested no probable statistical difference when aggregated at the state level. District level analyses, however, suggested variance across districts and across buildings within districts.

After reviewing these data, the AEA directors of special education supported the use of the growth model but suggested refraining from using the data as a system measure until a later date. Specifically, the AEA Directors encouraged further statewide understanding of the growth model and deeper understanding of its implications before using it as a means of measuring system (i.e., state, AEA, LEA or building level) progress.

Analysis of state universal screening data for reading. Iowa’s newly enacted Early Literacy Progression Law (Iowa Code §279.68 and IAC 281—62) requires all schools in the state to implement universal early literacy screening assessments three times each year across all students, in kindergarten through third grade. This requirement is designed for early identification and intervention for at-risk readers, including learners with disabilities. Several universal screening tools were approved for schools to use and the DOE purchased one of them and then developed a database to support data analysis. Ninety-one percent of Iowa’s elementary buildings elected to use the assessments and accompanying database in the 2014-2015 school year. The assessments used are the Formative Assessment System for Teachers (FAST). FAST is a suite of assessments. For the purposes of statewide improvement of Specially Designed Instruction, Iowa will be monitoring growth using the adaptive Reading (aReading) measure. This measure is administered as early as the winter of Kindergarten and through high school. It is a computer-adapted test that allows for the individualization of the assessment based on student skills. Therefore, if a third grader is reading two years below grade level, the test will pinpoint skills at that level. Additionally, because FAST aReading is administered via computer, accommodations are readily available for learners who need them. Reliability and validity data for FAST aReading indicate that it is highly predictive of reading outcomes and results are correlated with other standardized reading assessments. Additionally, reliability and validity in administration and scoring of the assessment is assured via built in online training, practice, and certification on both administration and scoring components of the assessments.

Iowa TIER is the department’s data system for student universal screening, intervention, and progress monitoring data. In this environment, educators can administer online universal screening and progress monitoring assessments and receive results back instantly. They can create customized intervention banks and individualized interventions, schedule students into interventions and monitor their progress. It is also possible to set multiple goals, individualized for each student and easily view teachers’ daily and weekly schedules related to assessment and intervention.

The universal screening data were analyzed by a small group of people with expertise in literacy and specially designed instruction. DOE consultants with expertise in literacy completed an initial analysis and then had external groups with expertise in literacy review the preliminary findings. External reviewers included representatives of the Iowa Reading Research Center, Collaborating for Kids (C4K), and Iowa’s Statewide Reading Team. Their findings were reviewed by SEAP and are described below.

Research suggests that individuals with IEPs perform better when their peers without disabilities also perform well. Iowa’s data follow this trend. For instance, Table 1 depicts the number of buildings that fall into various proficiency levels. No buildings had at least 60% of learners with IEPs meeting benchmarks if the building did not have at least 60% of learners without IEPs meeting benchmarks. Deeper analysis of the data, however, indicated that proficiency of peers is not sufficient for identifying buildings in need of support. Although 90% of participating elementary buildings had 60% of their third graders scoring at proficient or higher benchmarks, only 10% of all participating elementary buildings had 60% of third graders with IEPs scoring at proficient or higher on benchmarks (see Table 1). Indeed, of the 203 schools with 60% of students meeting benchmarks, 65.9% had less than 39% of students with IEPs who met benchmarks. Most surprising to review groups was that 91 schools had 0% of students with IEPs proficient.

Analysis of the first screening indicated that smaller percentages of students on IEPs met assessment targets than did their peers without disabilities (see Table 2). In kindergarten and first grade, it was found that both alphabetic principle and phonemic awareness were areas of high need. In second through sixth grade, both rate and accuracy were of concern. This suggests that learners with IEPs need to be explicitly taught skills related to alphabetic principle and decoding. Due to the consistency of these data across grade levels, these skill needs should be the first priority of support provided to Iowa teachers related to matching instructional focus to student needs.

Summary of data analysis. Through data analysis, Iowa identified two new measures for deeper understanding of the extent to which Iowa learners with disabilities are proficient readers by the end of third grade: growth on statewide assessments and percent of learners meeting benchmarks on universal literacy screeners. Analysis of these data indicate that Iowa learners with disabilities struggle to become proficient readers by the end of third grade, regardless of geographic location, free and reduced lunch participation and comparison to peers meeting benchmarks. Deeper analysis of the universal screening data indicated that learners with IEPs need to be explicitly taught skills related to alphabetic principle and decoding. Overwhelmingly, participants in the data analysis groups recommended using the universal screening data to set targets and measure progress while continuing to develop use of the growth model.
Analysis of State Infrastructure to Support Improvement and Build Capacity

A description of how the State analyzed the capacity of its current infrastructure to support improvement and build capacity in LEAs to implement, scale up, and sustain the use of evidence-based practices to improve results for children with disabilities. State systems that make up its infrastructure include, at a minimum: governance, fiscal, quality standards, professional development, data, technical assistance, and accountability/monitoring. The description must include current strengths of the systems, the extent the systems are coordinated, and areas for improvement of functioning within and across the systems. The State must also identify current State-level improvement plans and initiatives, including special and general education improvement plans and initiatives, and describe the extent that these initiatives are aligned, and how they are, or could be, integrated with, the SSIP. Finally, the State should identify representatives (e.g., offices, agencies, positions, individuals, and other stakeholders) that were involved in developing Phase I of the SSIP and that will be involved in developing and implementing Phase II of the SSIP.

Process for Analysis of Capacity of Current Infrastructure

Iowa used a multi-level approach to analyze the state’s infrastructure to support improvement and build capacity. A broad analysis of system capacity occurred as SEAP members analyzed data in each of the six goal areas reviewed for selection of Iowa’s state identified measurable result (SIMR). These six areas were:

1. Enter kindergarten ready to learn to read.
2. Are proficient readers by the end of 3rd grade.
3. Progress at a rate that ensures success across core content areas.
4. Are engaged in school and community.
5. Graduate from high school.
6. Are college and career ready.

As SEAP members discussed data related to each goal, they also discussed current activities directed toward improving outcomes in each goal area. DOE staff and those external agency staff engaged in related activities (e.g., Iowa Vocational Rehabilitation Services) discussed the infrastructure available to support current activities with SEAP. These discussions revealed which areas of need had activities likely to achieve results, areas which did not have activities and most importantly, the extent to which the state was ready to implement, scale-up, and sustain evidence-based practices to achieve the desired results. Once discussions had occurred for each of the six goals, SEAP members reviewed their findings to select a state identified measurable result. This expansive review of existing state infrastructure led SEAP to recommend the state identify all learners who received special education services be proficient readers by the end of 3rd grade as Iowa’s targeted measurable result. The goal to graduate ready for college and career was not recommended because the analysis revealed less infrastructure support in this area.

Selection of Iowa’s state identified measurable result (SIMR) permitted participants to move from across-the-board analysis of state infrastructure to a scrutiny of state supports to improve literacy. This was completed by examining existing information and collecting new information from parents, special educators, school administrators, AEA consultants, AEA administrators, state agency staff and DOE staff. The examination of existing information is described below in Overview of Iowa’s Infrastructure Systems. Additional information was gathered from focus group conversations with over 150 representatives of parents, special education teachers, general education teachers, local special and general education administrators, Area Education Agency (AEA) consultants, AEA special education administrators, institutions of higher education, other state agencies and Department of Education Special Education staff. Results of these conversations are included in Results of Infrastructure Analysis and Selection of Coherent Improvement Strategies.

Overview of Iowa’s Infrastructure Systems

Three components of Iowa’s infrastructure have a direct impact on Iowa’s identified measurable result that all learners who received special education services be proficient readers by the end of third grade: 1. Internal Department of Education organizational structures, resources and supports; 2. Partnerships with Iowa Area Education Agencies, especially the Collaborating for Iowa Kids (C4K) framework, and 3. Teacher Leadership Compensation legislation. This section provides an overview of each of these three components. Findings on the analysis of these areas is provided in Results of Infrastructure Analysis.

1. Internal Department of Education Organizational Structure. Since 2012 the Iowa Department of Education has experienced significant changes in leadership. The Division of Learning and Results, in which the Bureau of Special Education was housed, experienced 92% of its leadership as new to, or in new roles within, the DOE. During this transformative year, the newly appointed Division Administrator convened a twenty-six member team to address internal
The DOE's abilities to reach local education districts are a direct result of its partnerships with Area Education Agencies (AEAs). Since 1974, each Iowa district has received support from an AEA to provide specialized services and equity in the provision of programs and services across the state. The AEAs carry special education general supervision and compliance responsibilities and the charge to provide the services needed by the local school districts. Their primary role has been provision of special education support services to individuals under the age of 21 years requiring special education and related services, media services to all children through grade 12, and other educational services to pupils and education staff. The AEAs also define the system used to locate and identify students suspected of having disabilities and provide the personnel to conduct evaluation activities in collaboration with LEAs.

During the 2012-2013 year, the Iowa Department of Education realized that, although powerful, internal reorganization is not sufficient to transform Iowa's educational system toward optimal positive outcomes for students. To this end, administration investigated the possibility of greater participation in promising work originating across Iowa's Area Education Agencies - Collaborating for Iowa's Kids (C4K). C4K was established in 2011-12 as a vehicle to coordinate the AEA system – and then the AEA/DE system- toward greater efficiency. Though the DOE were members of C4K in its 2011-12 inaugural year, participation was variable at best. In the 2012-2013 year as the DOE sought to support effective statewide infrastructure, DOE participation in C4K rose from approximately 5 administrative personnel to over 40 personnel. As the educational system began to coalesce, C4K collectively found a need to identify its goal, priority areas, governance structure, intent and theory of action to support statewide work. To this end, significant work and study was completed.

To identify an initial C4K goal, groups reviewed Iowa testing data, and the National Assessment of Educational Progress (NAEP) data to understand the highest area of need as a state. The group celebrated that, with a student enrollment in 2013-2014 of 510,525 in 346 districts (Iowa Department of Education, 2015), Iowa has an 89.7% graduation rate and a dropout rate of 1.92% – rates that are among the best in the nation. However, after reviewing data across reading, mathematics and science, it became increasingly clear that over the course of nearly 10 years, Iowa has not only failed to increase 4th grade student reading performance; there has been a slight decrease in the skills of Iowa children (Scale score at 225 in 1992; Scale score of 224 in 2013, National Assessment of Educational Performance). Nationally Iowa slipped from 5th in the nation in student performance in reading, to 25th in just under 12 years. Data based on Iowa tests indicate a gap between students with IEPs: 29.9% proficient, and Non-IEP students at 78.05% proficient. English Language Learners fair a little better at 35.55% proficiency as compared to 73.29% proficiency of all students [Iowa testing 2012]. These data clarified the initial goal in C4K: Every child is proficient in reading by the end of third grade.

To identify C4K priority areas, groups reviewed The McKinsey Study (2011). The McKinsey Study includes an analysis of 20 systems from around the world, all with improving but differing levels of performance, examining how each has achieved significant, sustained, and widespread gains in student outcomes, as measured by international and national assessments. The authors sought to understand which elements were specific to the individual system and which were of broader or universal relevance. Based on their database of nearly 575 interventions mapped across 20 sample systems, they indicated...
there are six interventions that occur with equal frequency across all systems, but are manifested differently in each improvement journey stage:

**Revising curriculum and standard**
- From this, C4K established a focus on Standards & Curriculum or Iowa’s Early Learning Standards for PK students and the Iowa Core for students K-12th grade.

**Reviewing reward and remunerations structure**
- C4K did not establish a priority area to address rewards and remunerations, however they did pledge to coordinate directly with the IDE established Teacher Leadership and Compensation policy and program.

**Building technical skills of teachers and principals, often through group or cascaded training**
- From this, C4K established a focus on Educator Quality, and expanded this focus by Summer 2013 to include Professional Learning.

**Assessing student learning and using student data to guide delivery**
- From this, C4K established a focus on an Early Warning System[1] that was subsequently enveloped into the work of the priority area of Multi-Tiered System of Supports[2]

**Establishing policy documents and education laws**
- From this, C4K established a focus on School Improvement.

To establish C4K governance structure, groups reviewed National Implementation Research Network (NIRN)/Dean Fixsen’s work (c.f. Blase & Fixsen, 2013). C4K determined that a new way of working together required a new structure for planning, implementing and sustaining work that can collectively accomplish the goal that every child is proficient by the end of third grade. To this end, we developed a working Governance Structure, based on Fixsen’s work in implementation science, with the intent to support more efficient use of work groups and resources. Briefly, in any work, it is critical to establish groups of people to attend to specific functions necessary to move work forward within a system:

- **A. People who are able to lead across the system who are able to make decisions about resources and policies:** Collaborative (C4K) **Oversight.** Essentially, this is a decision-making group with membership that includes the DE Division Administrator and Associate Division Administrator, AEA Chiefs and Directors, LEA Superintendents and the Co-Chairs of Work Coordination.

- **B. People who are able to coordinate work across the system to ensure coherency and alignment of work, programs, products and training/coaching:** **Work Coordination.** Members include system facilitators, one each from the DE, AEA and LEA, and facilitators from each of the Work Teams.

- **C. People who are experts in identified areas within the state’s priority focus to identify/develop evidence-based frameworks, practices, strategies, programs and supports:** **Work Teams.** Members across the six teams below include experts regardless of agency or location (e.g., personnel at universities, national organizations, schools, AEA, DE, etc.). Please see Figure 1 for a list of work teams, purpose and major work they are charged to complete.

- **D. People who are able to provide critical input and advice on major proposals and decisions for the state:** **Advisory.** Members include stakeholders within and outside of the educational system.

- **E. People who are able to scale/implement across Iowa with fidelity:** **Implementation.** This group is often called C4K or The Collaborative. Members include DE, AEA and LEA personnel.

- **F. People who are able to develop essential communications across audiences:** **Communication.** Members include AEA and DE communication specialists.

- **G. People who are the first to apply the “what” (developed by the Work Teams) using the how (scaling/implementation developed and monitored by the Implementation group) to meet the goal that every child is proficient by the end of third grade:** **Partner schools.**

---

**Figure 1. Work Teams, Purpose and Major Work.**

**School Improvement:** This statewide work team is focused on ensuring regulatory responsibilities set forth in state and federal law and rule are used to position the DE, AEsAs and LEAs and other agencies and programs to engage in continuous improvement. This includes the following:

- Implementation & Scaling: To identify and adopt an evidence-based scaling and implementation model for the state;
- Continuous Improvement process: To develop, implement and embed a new continuous improvement model for the state;
- Data System: To create a statewide data system to support MTSS, data-based decision-making and continuous improvement;
- Healthy Indicators: To identify key indicators of the educational system and embed this into continuous improvement;
- Differentiated Accountability: To join healthy indicators, continuous improvement and tiered accreditation...
### Multi-Tiered System of Supports

This statewide work team is focused on ensuring every learner has the supports necessary to maximize benefits of instruction through evidence-based practices and supportive learning environments. This includes the following:

- **Data-Based Decision-Making**: To develop sequential steps, processes and tools for the collaborative inquiry questions;
- **Early Warning System**: To support identification of universal screening and progress monitoring measures, and support implementation of universal screening and progress monitoring assessment in early literacy;
- **Instructional Strategy and Material Intensification**: To identify evidence-based strategies and intervention programs;
- **Intensification of Instruction**: To develop the processes and tools needed to work through Collaborative Inquiry Questions D6-10 for both targeted and intensive tiers;
- **Evidence-based MTSS implementation for Advanced Learners and ELL**: To develop guidance for the system regarding how subgroups are served within MTSS

### Iowa Core/Iowa Early Learning Standards [Standards & Curriculum]

This work team is focused on ensuring that high quality, rigorous standards are being taught, assessed, and learned in every classroom. This includes the following:

- **Strategies [intervention program group has sunset]**: To develop materials and supports for core instruction at the universal tier;
- **CIQ D Questions**: To develop tools to support collaborative inquiry within the universal tier of supports;
- **Inventory**: To inventory materials and supports for core instruction at the universal tier grounded in the CIQ building blocks.

### Educator Quality

This work team is focused on ensuring all educators have the skills, abilities and support to provide quality instruction and educational environments for all learners. This includes the following:

- **Collaborative Inquiry Questions**: To develop a collaborative inquiry framework, manual and support system for educators;
- **Leadership Team**: To develop a statewide network for administrator leaders to sustain Multi-Tiered System of Supports, educator learning and continuous improvement.

### Professional Learning

This work team is focused on developing the professional learning structure and organization for training, and the support needed for sustainability within a statewide coach’s network. This includes the following:

- **Training**: To develop annual training calendar and work across teams to support development and implementation of training/professional learning;
- **Coaches Network**: To develop a statewide network for instructional leaders, coaches and administrators to sustain educator learning and continuous improvement;
- **Phase One Supports**: To identify and support needs of phase schools across implementation.

### Evaluation

This work team is focused on developing and implementing evaluation of process, progress and outcomes across C4K and TLC. This includes the following:

- **Design for C4K and TLC**: To develop the evaluation design for C4K and TLC;
- **Evaluate C4K and TLC**: To implement the evaluation design for C4K and TLC.
- **School Implementation Tool**: To identify and/or adapt implementation evaluation tools to implement at the school level.

Based on the identified goal, priority areas and governance structure, C4K created a theory of action on behalf of the educational system:

If Iowa’s educational system comes to consensus on a select number of high impact priorities and related drivers (Standards and Curriculum, MTSS, Educator Quality, Professional Learning, School Improvement and Evaluation);

and we agree to establish the infrastructure necessary to effectively focus statewide efforts and implementation (Oversight, Work Coordination, Work Teams, State Implementation Team, Communication, Advisory);

and if there is consistent statewide implementation and support for scaling coordinated across priorities in critical areas (Leadership, Resources/Budgets, Communication, Fidelity/Evaluation, Professional Development, Evidenced-based Programs/Strategies);

and if we build the capacity of the educational system to provide sustained instructional coaching and support to educational personnel to implement priorities;

and if educational personnel implement priorities with fidelity;

and if there is an established evaluation plan focused on outcome impact and monitoring implementation to determine progress, development and next steps;

then educators will have the knowledge and skills they need to ensure the success of all learners and all learners are proficient readers by the end of 3rd grade (across subgroups).

Finally, C4K assimilated the data on literacy, research on key interventions, and what is collectively understood as the impact of illiteracy to identify the C4K intent (to work...
more effectively and efficiently as a full educational system to accomplish a few agreed upon priorities), goal (all students will be proficient in reading by the end of 3rd grade across subgroups), and priority areas (Standards & Curriculum, MTSS, Educator Quality, School Improvement, Professional Learning and Evaluation).

3. **Teacher Leadership and Compensation System.** The Iowa legislature has recognized that an external coaching model is insufficient to change practices, that research indicates that training plus coaching and data feedback result in a level of application of 95% (Joyce & Showers, 2002), and resources are needed to fully implement a successful leading and coaching infrastructure. To this end, the Iowa Legislature established the Teacher Leadership and Compensation System in 2013 as well as funding to support the new system. This legislation created a four-year process to develop a statewide teacher leadership and compensation network that will include every Iowa district and building. In the first year (2013-14) of implementation, the Legislature appropriated $3.5 million for planning grants to local school districts and every district in the state voluntarily applied for the grants. For each program year 2014-2017, additional monies have been allocated to support one-third of districts annually joining implementation of the Teacher Leadership and Compensation system. After the 2016-17 school year, the funding will be added into the school funding formula, making the system a permanent, fully-funded part of Iowa's schools.

**Results of Infrastructure Analysis**

Analysis of Iowa’s infrastructure to ensure that learners who received special education services are proficient readers by the end of third grade indicate that Iowa is poised to provide supports that will assist learners to become proficient readers. Three major findings emerged from the examination of Iowa’s infrastructure to support literacy instruction. They are described here and were essential for the selection of coherent improvement strategies. These findings are:

Structures, mechanisms and leadership exist to provide resources and supports to improve literacy instruction for all Iowa learners.

Successful implementation of a multi-tiered system of support is just emerging.

Focus on specially designed instruction has been lacking.

1. **Structures, mechanisms and leadership to improve literacy instruction exist.** Reorganization of the Department of Education, partnerships through C4K and the Teacher Leadership and Compensation legislation have all strengthened Iowa’s infrastructure to provide literacy supports. As a result of the DOE internal reorganization, special education staff are naturally integrated into the broader work of the Department. For example, Bureau Chiefs are now responsible for the evaluation of special education staff in their bureaus which has increased their awareness of special education priorities and the specialized work of consultants. This means that upper management considers special education work as they make decisions, set priorities and assign resources on a daily basis. Indeed, two Bureau Chiefs are members of the internal DOE SSIP team.

The partnership between the DOE and the AEAs in Collaborating for Iowa's Kids (C4K) has formalized commitment across LEAs, AEAs and the DE to:

- Work as a unified system;
- Agree that the role of the DE is to set direction and lead, the role of the AEAs is to implement; and the role of the LEA is to support families and their children to be successful in school and in life; and
- Focus efforts and resources on selected priorities, (current priority is for all learners to be proficient readers by the end of third grade).

The collaborative structures instituted through C4K have provided infrastructure leverage in four ways:

1. Created the infrastructure through which statewide literacy work is disseminated and supported;
2. Established Early Warning System in the area of reading - implemented in over 91% of the state’s elementary public and non-public schools buildings - that identifies students in need of more support within weeks of starting school in the fall. This system includes:
   a. Iowa TIER, the state’s data system that allows easy access to student data, as well as school system implementation information;
   b. Universal screening for all students from preschool through sixth grade;
   c. Progress monitoring for all students that indicates student progress in teacher-delivered interventions and supports from kindergarten through sixth grade –
3. Implemented coaches network for external and internal coaches serving 85 elementary school buildings;
4. Implemented leadership network for administrator/instructional leaders in 85 elementary school buildings in their second year of implementing MTSS; and
5. Identified evidence-based intervention programs at the universal, targeted and intensive levels within MTSS.

The Teacher Leadership and Compensation System has many components, some of which closely align with Iowa’s needs for effective literacy instruction and work of C4K. Specifically, schools receive funding to have twenty-five percent of teachers become teacher-leaders. The majority of districts choose to provide reduced teaching loads to those teacher-leaders who then provide job-embedded professional learning opportunities to other staff. This system is designed to provide ongoing support for implementation of effective practices. While this provides an incredible infrastructure for the state, and a catalyst to provide ongoing training and technical assistance – it lacks critical evidence-based content in special education. An established coaching structure is critical and necessary – the absence of special education content within that structure provides both a challenge and an opportunity.

2. **Successful implementation of a multi-tiered system of support is just emerging.** A strong component of Iowa’s infrastructure is the statewide data system for required universal screening and progress monitoring as established through C4K. The results of these data, however, indicate that less than half of Iowa elementary buildings have established a multi-system of support where 80% of their learners without IEPs meet reading benchmarks. This indicates there is much literacy work to be done statewide for all learners. The strong infrastructure is expected to be integral to improvement efforts.

Focus group conversations with over 150 parents, special education teachers, general education teachers, local special and general education administrators, Area Education Agency (AEA) consultants, AEA special education administrators, institutions of higher education, other state agencies and Department of Education Special Education staff overwhelmingly identified that while MTSS provides a needed model for all, there remains a need to embed a strong framework of specially designed instruction for learners...
Indeed, initial focus group conversations identified a need to move beyond identification of eligibility for special education to focus on specially designed instruction. Historically, AEA special education staff have roles other than that of instructional coaching and support. Of the 788 FTE identified as core services in the AEA special education system, only thirty-eight percent were special education consultants. Even when adding the specialty positions such as transition consultants or parent-educator coordinators the percentage of those who could possibly provide external, ongoing support rose only to forty-three percent or a total of 369 FTE. 

A review of current FTE distribution indicated that the majority of AEA special education staff have roles other than that of instructional coaching and support. Of the 788 FTE identified as core services in the AEA special education system, only thirty-eight percent were special education consultants. Even when adding the specialty positions such as transition consultants or parent-educator coordinators the percentage of those who could possibly provide external, ongoing support rose only to forty-three percent or a total of 369 FTE. 

Assuming that each of those individuals had the necessary knowledge and skills to support educators in the field, 369 is an inadequate number at best, to ensure the effective and efficient delivery of specially designed instruction in over 1,386 schools. If we are to change the trajectory of students with disabilities, the personnel charged with providing professional learning and technical assistance must have the knowledge and skills to support a change in instructional practice at the point of delivery.

Further conversations with additional groups of parents, teachers, administrators and faculty from institutes of higher education identified that there was no single common understanding of specially designed instruction beyond the definition provided in IDEA. Groups were unable to operationally define specially designed instruction so that it could be reliably observed in a classroom.

Absent clearly articulated features of specially designed instruction, it is impossible to determine fidelity of its implementation. This has resulted in significant variances across Iowa in the interpretation of specially designed instruction and thus a variation of the knowledge and skills expected for the delivery of specially designed instruction. Ultimately, these variances affect the growth and performance of learners identified as eligible for special education supports and services. In addition, without a clear understanding of specially designed instruction, it is impossible to efficiently organize resources and ensure that technical assistance and professional development activities are consistent and implemented with fidelity.

**Summary of infrastructure analysis.** Although Iowa has begun to build an infrastructure to support effective early literacy assessment and instruction, it is apparent that Iowa’s current infrastructure is insufficient to address the amount of professional learning needed to ensure special educators have the ability to diagnose, design, and deliver high quality specially designed instruction so that learners with disabilities are proficient readers by the end of third grade. Specific infrastructure challenges to address include: (1) service delivery confusion and an historical focus on compliance/child find at the exclusion of instructional supports, (2) variability of implementation of evidence-based specially designed instruction, and (3) lack of evidence-based content in special education to support Iowa’s newly enacted Teacher Leadership and Compensation system.

### Alignment with State-level Initiatives

Iowa’s State Systemic Improvement Plan (SSIP) is directly connected to Iowa’s rigorous academic standards for all learners and to ongoing efforts to improve teaching and learning. Indeed, Iowa’s SSIP shares the same measureable result with the state’s primary change vehicle, C4K: Every child is proficient in reading by the end of third grade. Analysis occurred at multiple levels and with multiple components. Descriptions of these analyses were embedded in the preceding sections.

### Participants

Listed below are the representative roles that contributed to the development of Iowa’s SSIP, Phase I. They will also be involved in developing and implementing Phase II of Iowa’s SSIP. Their commitment to this work was evident in Iowa’s recent proposal for a State Personnel Development Grant (SPDG). While the focus of the grant is specially designed instruction, Iowa selected the first content area to focus on early literacy, thus aligning completely with Iowa’s SIMR. Letters of participation for the SPDG were provided by ASK Resource, the AEs, Iowa’s Special Education Advisory Panel, a local school district and Iowa Vocational Rehabilitation Services.

### Table 3. Listing of Roles Participating in Development of Phase I

| AEA Chiefs | DOE Chief, Bureau of Learner Supports and Strategies | Institutes of Higher Education |
| AEA Directors of Special Education | DOE Chief, Bureau of School Improvement | Iowa Vocational Rehabilitation Services |
| AEA Instructional Services Directors | DOE Director of Special Education | Individuals with Disabilities |
| AEA Media Directors | DOE Special Education Consultants | Special education administrators, including special operated programs |
| AEA SPED Consultants | DOE Part C Coordinator and Consultants | Special education teachers |
| AEA Data Consultants | Department of Human Services | Parents |
| ASK Resource Center (Iowa’s PTI) | Department of Justice | UEN Directors of Special Education |
| Disability Rights Iowa (Iowa’s P & A) | General education teachers and administrators | |

---

[1] Iowa’s Early Warning System includes state-supported universal screening and progress monitoring assessments in the area of reading, and the data system to support data collection, analysis, reporting and immediate use to guide instruction.
In addition to the McKenzie study, C4K reviewed John Hattie’s book, *Visible Learning*. Hattie conducted extensive meta-analyses across interventions - third on the list of interventions with the greatest impact on achievement is MTSS with an effect size above 0.7. This provided additional support for our system to focus on MTSS as a priority area.

---

**State-identified Measurable Result(s) for Children with Disabilities**

A statement of the result(s) the State intends to achieve through the implementation of the SSIP. The State-identified result(s) must be aligned to an SPP/APR indicator or a component of an SPP/APR indicator. The State-identified result(s) must be clearly based on the Data and State Infrastructure Analyses and must be a child-level outcome in contrast to a process outcome. The State may select a single result (e.g., increasing the graduation rate for children with disabilities) or a cluster of related results (e.g., increasing the graduation rate and decreasing the dropout rate for children with disabilities).

**Statement**

Increase the percentage of learners with disabilities that are proficient readers by the end of third grade.

**Description**

Iowa will increase the number of learners with disabilities that are proficient readers by the end of the third grade. Implementation of the SSIP will result in an increase in the number of children with IEPs scoring at or above benchmark on a valid and reliable literacy screening assessment, based on the assessment criterion cut point.

---

**Selection of Coherent Improvement Strategies**

An explanation of how the improvement strategies were selected, and why they are sound, logical and aligned, and will lead to a measurable improvement in the State-identified result(s). The improvement strategies should include the strategies, identified through the Data and State Infrastructure Analyses, that are needed to improve the State infrastructure and to support LEA implementation of evidence-based practices to improve the State-identified Measurable Result(s) for Children with Disabilities. The State must describe how implementation of the improvement strategies will address identified root causes for low performance and ultimately build LEA capacity to achieve the State-identified Measurable Result(s) for Children with Disabilities.

**Overview of Improvement Strategies**

Acknowledging the input of those who contributed to Iowa’s SSIP, the Iowa Department of Education worked with additional participants to operationally define and develop a much needed framework for Specially Designed Instruction (SDI). The primary group responsible for this work included 50 representatives of parents, general educators, special educators, building principals, AEA consultants, district directors of special education, AEA directors of special education, institutes of higher education and DOE staff. These participants also represented Iowa’s most rural and urban districts. Over the past year, this group has identified four key components of specially designed instruction, each with their own set of critical features. For simplicity, the four key components are listed below. A full listing of components and critical features is attached as SDI Framework. 1. Diagnose for Instructional Design, 2. Design for Instructional Delivery, 3. Deliver for Learner Engagement, and 4. Engage for Learning. The SDI framework and Iowa’s SIMR were used to form the foundation for Iowa’s recently submitted proposal for OSEP’s State Personnel Development Grants (SPDG). The strategies proposed there are the same ones Iowa will use to achieve its SIMR. Establish a technical assistance system to effectively implement and support personnel preparation and professional development in the area of specially designed literacy instruction. Build capacity of Iowa’s coaching network so that network participants have the capacity to train, coach, and support delivery of specially designed literacy instruction with integrity. Deliver high quality professional development so that specially designed literacy instruction is implemented with fidelity and effectively improves reading proficiency for a wide range of learners. The backbone of the statewide system to ensure effective specially designed literacy instruction will be a collaborative partnership comprised of four critical teams: Core Team; Design Team; Delivery and Support Team; and Networking Teams. These teams parallel the structures established in C4K and co-participation of team leads will ensure alignment of activities. Extent to Which Improvement Strategies are Based on Data and Infrastructure Analysis Iowa has an emerging infrastructure for literacy support, however Iowa’s special education service delivery model is currently focused almost exclusively on compliance and child find activities. In addition, principals and special education teachers have lost focus on the fundamental purpose of special education – to support students to access core content via specially designed instruction. The proposed team structure to be sustained, however, Iowa’s special education service delivery model will need to be realigned and providers re-engaged. The challenge is to identify new organizational processes and structures while entrenched in maintaining day-to-day functioning of the organization. A critical activity, therefore, will be to develop innovative approaches for area and local education agencies to provide ongoing support for effective specially designed instruction. A think-tank of people who have special expertise in SDI, program management, leading change, data-based decision making and implementation science will be convened to examine possibilities and develop recommendations. This will include national consultants, AEA special education directors and other administration, Iowa’s PTI Director, and Iowa Department of Education staff, including members of C4K and the Core Team. The think-tank will propose a redesigned service delivery model and recommend actions to ensure a technical assistance system that is cost effective and accessible including the use of technology, peer mentoring and distance learning – helping AEA and LEA personnel transition from a confused configuration of service delivery and primary support on compliance, child find and general education support, to an improved focus on specially designed instruction within a Multi-Tiered System of Supports. Quality tools, materials and professional development will be needed to build the capacity of Iowa’s coaching network. In order to develop quality tools, materials and professional development the precise areas of knowledge and skills that parents, educators, and leaders need to diagnose, design and deliver specially designed literacy instruction will be assessed by the Design Team. Materials and tools will emphasize alphabetic principle and decoding, the two skills consistently lacking in the analysis of IEP learners who participated in the Winter, 2015 universal screening. The Design Team will also finalize the description of coach roles and responsibilities, provide direct training to the Delivery and Support Team, and evaluate the training provided, revising accordingly. Highly effective and ongoing professional learning opportunities will be needed to accomplish changes at the classroom level. This will be accomplished through the use of external and internal coaches. The Delivery and Support Team will serve as external coaches and will be comprised of personnel who are expert at professional learning, delivery and support within Iowa’s educational system. These individuals will organize and provide professional development (face-to-face and online modules) based on the content established by the Design Team, as well as organize and provide ongoing support to internal coaches, including parents, leaders and coaches. Extent to Which Improvement Strategies are Sound, Logical and Aligned FFY 2013 Part B State Performance Plan (SPP)/Annual Performance Report (APR) 7/6/2015 Part B State Performance Plan (SPP)/Annual Performance Report (APR)
for Instructional Delivery, 3. Deliver for Learner Engagement and 4. Engage for Learning (see attached for full description of the framework). Although this framework was purposely designed to be applicable to any content, e.g., literacy, math, behavior, communication, secondary transition, Iowa’s SSIP will focus on applying the SSI framework to the content of literacy for PK-3 learners served under IDEA. Information used as the basis for these materials is described below. Early literacy instruction. Early literacy is described as the knowledge and skills that learners need in order to read and write. In the area of decoding and the teaching of reading skills, representing the reciprocal relationship between these two literacy elements. Hence, oral language is key to success in both reading and writing. Oral Language is “what is used to express ideas verbally and to understand language shared by others,” (Cavanaugh, 2012, p. 32). It serves as the crucial beginning point in a young child’s literacy development. Young children, from birth on, must have both continuous and chance exposure to language, building a crucial foundation in both speaking (expressive), and listening (receptive) vocabularies. Providing young children with many opportunities for interactive language experiences establishes both background knowledge and language skills which directly contribute to later literacy development in phonological awareness and print knowledge (Paulson & Moats, 2010) as well as vocabulary and listening comprehension. In fact, research shows that word level and then progress to processing sounds at the syllable and phoneme level. In the area of decoding and the teaching of vocabulary (4) comprehension and (5) fluency. Research regarding phonemic/phonological awareness for students with significant disabilities/complex communication needs and implicit methods of vocabulary instruction for persistently struggling readers. Addressing the ever-widening language gap means accelerating the word-learning rate of students who persistently struggle. They will need much deeper language and literacy content knowledge and a much broader set of skills and instructional expertise when it comes to the scientifically based practices that will accelerate learning for struggling readers, and will need to have the skills and support to be able to implement these practices and sustain them in their classrooms and buildings. Educators need to know and practice evidence-based ways to best teach reading to persistently struggling learners. For example, project participants will need to learn and practice phonemic awareness, which is one component of phonological awareness and it is the ability to hear, identify, and manipulate individual sounds- phonemes- in spoken words. For students with persistent reading difficulties phonemic awareness instruction needs to focus on accuracy and automaticity which is often very difficult for students with persistent reading difficulties. Current research has found that instruction at the phoneme level has the highest payoff for reading and spelling. It is also true that the two phonemic awareness skills that have the highest leverage and impact with all readers, but especially struggling readers, are phoneme blending and phoneme segmentation. Research also informs us that decoding skills are necessary to learn to read, and knowledge of word meanings also helps children acquire printed word recognition and reading fluency (NICHD, 2000). Methods that have shown to have the strongest impact on students with persistent reading difficulties targeted the grapheme-phoneme (letter-sound) elements throughout words (initial, medial, final) and provide meaningful, contextually appropriate instruction. It is also true that the two phonemic awareness skills that permit a reader to construct the meaning of text. For persistently struggling readers, it is a must that project participants know how to provide the type of instruction that fosters automaticity in word recognition. The brain has only a limited amount of what researchers call “desk space” or attention capacity. Project participants must know how to provide the level of direct instruction and practice that will cause learners to rapidly recognize word patterns, spacing, word meanings, and pronunciation so that they can ultimately comprehend what they are reading. Research studies have also found that struggling readers need to build both depth and breadth of vocabulary at the same time that they are building their decoding skills. This means that project participants will need to know how to integrate the teaching of the meaning of words while struggling readers are also learning to decode the words. The full recognition of a word requires an association with its meaning as well. In order to accomplish this, participants will need to work together to provide both explicit and implicit instruction. Explicit instruction is strong when learners have a large knowledge base of words and of the people who are behind. Leading researchers (Beck, et al., 2002, Graves, 2006; Stahl & Nagy, 2006) agree that it is not possible for teachers to teach 2,000-3,000 words directly every year. Students with persistent reading difficulties, who need more of a direct instruction approach, will need word level opportunities that build in more scaffolding. Finally, in regards to comprehension, a review of reading comprehension studies with students with persistent reading difficulties supports the use of strategies recommended by the National Reading Panel (2000). These strategies are also most effective when students learn and practice them in meaningful contexts and when they are FFY 2013 Part B State Performance Plan (SPP)/Annual Performance Report (APR) 7/6/2015 Page 69 of 72 bundled. The Design Team will use Iowa data, research and national experts to organize evidence-based practices for instruction within the SSI framework and develop professional learning tools, materials and opportunities. Literacy instruction for those with significant cognitive disabilities. The emphasis on creating and sustaining meaningful access to the general education curriculum for students with significant cognitive disabilities has increased over the last decade (Browder, Wakeman, Flowers, Rickelman, Pugalee, & Karvon, 2007). Recent legislation, including the 1997 and 2004 amendments to the Individuals with Disabilities Education Act (IDEA) and the No Child Left Behind Act (NCLB) of 2001 have provided the impetus for change. With the intent of providing equitable educational opportunities for students with significant cognitive disabilities, current State of Iowa initiatives have centered upon the development of challenging and rigorous alternate achievement standards- the Iowa Core Essential Elements in English Language Arts (ELA). In addition, measuring student achievement in relation to Iowa Core Essential Elements in ELA through the Dynamic Learning Maps Alternate Assessment, the State of Iowa’s Accountability Assessment and Iowa requirements for Early Literacy Implementation specific to students with significant cognitive disabilities has emphasized greater accountability on behalf of school districts and teachers. Special designated instruction for students with significant disabilities as it relates to literacy, stems from an increasing array of research evidence which convincingly demonstrates that children who learn to read at an early age have a better chance of developing strong reading skills (Broderick & Kasa-Hendrickson, 2001; Erickson & Koppenhaver, 1995; Foley & Staples, 2003; Kliewer & Landis, 1999), provided professional educators have the necessary knowledge and skills. A recent research monograph provides insights on original scholarship in the area of specifically designed instruction for learners with significant cognitive disabilities (University of North Carolina Center for Literacy and Disabilities Studies), specific to (1) phonological awareness and phonemic skills (2) decoding and the teaching of spelling (3) vocabulary (4) comprehension and (5) fluency. Research regarding phonemic/phonological awareness for students with significant disabilities/complex communication needs indicate that these students do develop these skills in reading; however, they experience difficulty with tasks based on the load each task places on phonological memory rather than the size of the unit being analyzed (Larsson & Sandberg, 2008). Research also finds that students with significant disabilities/complex communication needs to do not follow the pattern of first learning to process sounds at the word level and then progress to processing sounds at the syllable and phoneme level. In the area of decoding and the teaching of spelling, studies surrounding word identification for students with significant disabilities/complex support needs indicate that increased opportunities to focus on the printed word increased performance. Vocabulary instruction should distinguish between word identification instruction and vocabulary instruction for students with significant disabilities. Sight spelling, studies surrounding word identification for students with significant disabilities/complex support needs indicate that increased opportunities to focus on the printed word increased performance. Vocabulary instruction should distinguish between word identification instruction and vocabulary instruction for students with significant disabilities. Sight
Theory of Action

A graphic illustration that shows the rationale of how implementing the coherent set of improvement strategies selected will increase the State's capacity to lead meaningful change in LEAs, and achieve improvement in the State-identified Measurable Result(s) for Children with Disabilities.

**Theory of Action**

Illustration

Provide a description of the provided graphic illustration (optional)

Infrastructure Development

(a) Specify improvements that will be made to the State infrastructure to better support EIS programs and providers to implement and scale up EBPs to improve results for infants and toddlers with disabilities and their families.

(b) Identify the steps the State will take to further align and leverage current improvement plans and other early learning initiatives and programs in the State, including Race to the Top-Early Learning Challenge, Home Visiting Program, Early Head Start and others which impact infants and toddlers with disabilities and their families.

(c) Identify who will be in charge of implementing the changes to infrastructure, resources needed, expected outcomes, and timelines for completing improvement efforts.

(d) Specify how the State will involve multiple offices within the State Lead Agency, as well as other State agencies and stakeholders in the improvement of its infrastructure.

All narrative provided in Phase I is relevant for the implementation of SSIP Phase II with one exception noted.

**NOTE:** This is the original Phase I proposal. Implementation planning in 2015 suggested that Iowa is not ready to implement cohort work in 2016-17. Phase II proposal adjusts the timeline for cohort implementation.
Iowa selected three improvement strategies to ensure increased percent of third graders who are proficient readers by the end of third grade:

1. Establish a technical assistance system to effectively implement and support personnel preparation and professional development in the area of specially designed literacy instruction.
2. Build capacity of Iowa’s coaching network so that network participants have the capacity to train, coach, and support delivery of specially designed literacy instruction with integrity.
3. Deliver high quality professional development so that specially designed literacy instruction is implemented with fidelity and effectively improves reading proficiency for a wide range of learners.

These three strategies are inter-related and affect both infrastructure development and support for LEA implementation of effective based strategies. For simplicity, the first two strategies are discussed here, within Infrastructure Development and the third strategy is discussed within Implementation of Evidence Based Practices.

The backbone of the statewide system to ensure effective specially designed literacy instruction will be a collaborative partnership comprised of four critical teams: Core Team; Design Team; Delivery and Support Team; and Networking Teams. These teams parallel the structures established in C4K and co-participation of team leads will ensure alignment of activities. The establishment of these teams, in itself, is a change in the current infrastructure. A description of the teams and their relationship to each other can be found in Table 1. Teams, Membership and Responsibilities (see attached). The Iowa Department of Education is deeply committed to the work of the SSIP and as such is dedicating 100% of its State Personnel Development Grant (SPDG) for this work. Included in the SPDG is a subcontract to Iowa’s PTI. Iowa Department of Education is also dedicating additional DOE staff time to serve as leads on each of the committees. Table 2. Person Loading Chart identifies the time that each role will give to accomplishing SSIP activities.

Iowa began development of Phase II of the SSIP by developing literacy materials and professional learning strategies in Summer, 2015 and testing them with twelve usability sites, beginning Fall, 2015. Although only four months of work with usability sites has been completed, there are a number of findings which serve as the basis for the activities and timelines outlined in this Implementation Plan. These findings were:

- Variability across districts was expected, but it was greater than anticipated. Tools to determine district readiness for implementation and to differentiate professional learning are needed. The materials must include identification of existing infrastructure and leadership supports.
- Coaching expectations/roles need stronger clarification. Coaches need more opportunities to build capacity prior to engaging school teams.
- Teachers want/need to get through the key components of the SDI framework (diagnose, design, deliver) so they can engage their students immediately. Going deeply into one component and waiting 3 months before the next component is introduced was frustrating to participants.
- We are not ready to implement Cohort I. To do that we need full development of our content and our coaching materials. Further discussion of cohort selection, size and timelines can be found in Implementation of Evidence Based Practices.
Emphasis, therefore, will be to design and test a coaching platform prior to engaging a cohort. The coaching platform will:

- Be an inquiry based model that explores the kind of coaching needed for content and system coaching
- Identify common set of competencies (based on the answers to the above)
- Identify what is specific to the content area
- Identify system support needs
- Describe the end user side
- Describe when one gets engaged and how one gets engaged
- Provide a clear delineation of coaching for literacy and coaching systems of support for literacy instruction across the strands
- Identify non-negotiables

The coaching platform will be developed with the participation of AEA and LEA partners, institutions of higher education, and aligned with work of C4K and TLC. This work will be supported through outside technical assistance with national experts in the area of coaching as well as existing supports through the SigNetwork.

Table 3 (see attached) identifies major tasks, activities and timelines to accomplish each of Iowa’s three improvement strategies. Timelines for completion and implementation of the coaching platform can be found in Activity 1.1. The first objective in Table 1 mirrors strategy 1: Establish a technical assistance system to effectively implement and support personnel preparation and professional development in the area of specially designed instruction. Additional activities to complete this objective are further outlined on pages 1-2 in Table 3.

Iowa’s second major strategy to increase the percentage of third graders with IEPs who are proficient readers is to build the capacity of Iowa’s coaching network so that network participants have the capacity to train, coach, and support delivery of specially designed instruction with integrity. Major activities to accomplish this work are outlined on the third page of Table 3 under Objective 2. As mentioned above, preliminary work with twelve usability sites indicates that coaching supports need to be strengthened before beginning work with building teams. Projected timelines are to complete development of coaching competencies and readiness tools in Summer 2016. Intensive supports would be provided to coaches in summer and fall- with building level implementation beginning in Winter. Supports will include face-to-face professional learning, webinars, on-site modeling and feedback and personal learning communities.

Support for EIS programs and providers Implementation of Evidence-Based Practices

(a) Specify how the State will support EIS providers in implementing the evidence-based practices that will result in changes in Lead Agency, EIS program, and EIS provider practices to achieve the SIMR(s) for infants and toddlers with disabilities and their families.
(b) Identify steps and specific activities needed to implement the coherent improvement strategies, including communication strategies and stakeholder involvement; how identified barriers will be addressed; who will be in charge of implementing; how the activities will be implemented with fidelity; the resources that will be used to implement them; and timelines for completion.
(c) Specify how the State will involve multiple offices within the Lead Agency (and other State agencies such as the SEA) to support EIS providers in scaling up and sustaining the implementation of the evidence-based practices once they have been implemented with fidelity.

Iowa selected three improvement strategies to ensure increased percent of third graders who are proficient readers by the end of third grade:

1. Establish a technical assistance system to effectively implement and support personnel preparation and professional development in the area of specially designed literacy instruction.
2. Build capacity of Iowa’s coaching network so that network participants have the capacity to train, coach, and support delivery of specially designed literacy instruction with integrity.
3. Deliver high quality professional development so that specially designed literacy instruction is implemented with fidelity and effectively improves reading proficiency for a wide range of learners.
These three strategies are inter-related and affect both infrastructure development and support for LEA implementation of effective based strategies. For simplicity, the first two strategies were discussed within Infrastructure Development and the third strategy is discussed here within Implementation of Evidence Based Practices.

As discussed in Infrastructure Development, preliminary work with twelve usability sites indicated that Iowa is not ready to implement Cohort I. Our original proposal from Phase I was:

Two cohort groups will be targeted to participate in SSIP activities. Each cohort will include 70 buildings for a total of 140 buildings. This represents 70% of the 203 elementary buildings with 60% or more of their learners without disabilities who reached their reading benchmarks on Winter 2015 universal screeners, but with 39% or fewer of their learners with disabilities who met them. Cohort One buildings will be selected during the 2015-16 school year and Cohort Two buildings will be selected during the 2017-18 school year.

Instead, Iowa will initiate another year of usability testing. In the 2016-17 school year ten to twelve new schools will be identified to participate in usability testing of both literacy content and coaching supports, including implementation fidelity. The twelve sites that participated in the 2015-16 usability testing will be invited to continue during the 2016-17 school year. This means that up to twenty-four sites may participate in the 2016-17 school year. Cohort I site selection of up to 70 schools will occur in 2017 for implementation during the 2017-18 school year. An additional Cohort II selection is targeted for the 2018-19 school year for implementation in the 2019-20 school year. Major activities and timelines can be found on page 4 of Table 3. Responsibilities for these activities and time commitments are found in Table 2. Person Loading Chart.

**Evaluation**

(a) Specify how the evaluation is aligned to the theory of action and other components of the SSIP and the extent to which it includes short-term and long-term objectives to measure implementation of the SSIP and its impact on achieving measurable improvement in SIMR(s) for infants and toddlers with disabilities and their families.

(b) Specify how the evaluation includes stakeholders and how information from the evaluation will be disseminated to stakeholders.

(c) Specify the methods that the State will use to collect and analyze data to evaluate implementation and outcomes of the SSIP and the progress toward achieving intended improvements in the SIMR(s).

(d) Specify how the State will use the evaluation data to examine the effectiveness of the implementation; assess the State’s progress toward achieving intended improvements; and to make modifications to the SSIP as necessary.

The Iowa Department of Education, through its SPDG, has hired Measurement, Incorporated to conduct the evaluation of all SSIP activities. Measurement Incorporated responded to a Request for Proposals based on the logic model submitted with Iowa’s SPDG. As can be seen in Figure 1, the SPDG logic model directly aligns with the Iowa’s Theory of Action (Figure 2) and includes both short and long term objectives. The evaluation, therefore, is directly aligned to the theory of action and other components of the SSIP. Detailed description of the evaluation plan is attached. Evaluation information will be used by the Core Team, Design Teams, SEAP and other stakeholders to make summative and formative decisions.

**Technical Assistance and Support**

Describe the support the State needs to develop and implement an effective SSIP. Areas to consider include: Infrastructure development; Support for EIS programs and providers implementation of EBP; Evaluation; and Stakeholder involvement in Phase II.

Iowa’s biggest area of need is in the development of an infrastructure that will increase the effectiveness of specially designed instruction at the systems level and within the specific content of literacy. We currently receive technical assistance from an outside contractor and through the SigNetwork. We will continue to receive support from these sources and look forward to other support opportunities.
